The service tag is a unique alphanumeric identifier that allows Dell service technicians to identify the hardware components in your computer and access warranty information.

Battery charge and status light

The following table lists the battery charge and status light behavior of your Dell Precision 5680.

Table 1. Battery charge and status light behavior

| Power Source | LED Behavior | System Power State | Battery Charge Level |
|--------------|--------------------------|--------------------|----------------------|
| AC Adapter | Off | S0 - S5 | Fully Charged |
| AC Adapter | Solid White | S0 - S5 | < Fully Charged |
| Battery | Off | S0 - S5 | 11-100% |
| Battery | Solid Amber (590+/-3 nm) | S0 - S5 | < 10% |

- S0 (ON) - System is turned on.
- S4 (Hibernate) - The system consumes the least power compared to all other sleep states. The system is almost at an OFF state, expect for a trickle power. The context data is written to hard drive.
- S5 (OFF) - The system is in a shutdown state.

Set up your Dell Precision 5680

About this task

NOTE: The images in this document may differ from your computer depending on the configuration you ordered.

Steps

1. Connect the power adapter and press the power button.

NOTE: To conserve battery power, the battery might enter power saving mode. Connect the power adapter and press the power button to turn on the computer.

2. Finish operating system setup.

For Ubuntu:

Follow the on-screen instructions to complete the setup. For more information about installing and configuring Ubuntu, search in the Knowledge Base Resource at www.dell.com/support.

For Windows:

Follow the on-screen instructions to complete the setup. When setting up, Dell recommends that you:

- Connect to a network for Windows updates.
 - NOTE:** If connecting to a secured wireless network, enter the password for the wireless network access when prompted.
- If connected to the internet, sign-in with or create a Microsoft account. If not connected to the internet, create an offline account.
- On the **Support and Protection** screen, enter your contact details.

3. Locate and use Dell apps from the Windows Start menu—Recommended.

Dell Optimizer

This section details the Dell Optimizer specifications of your Dell Precision 5680.

Dell Optimizer is a software application that intelligently optimizes the performance of your system by using artificial intelligence and machine learning. Dell Optimizer dynamically configures your system settings to optimize the performance of your applications. It improves the productivity, performance, and user experience through system usage analysis and learning.

On Dell Precision 5680 with Dell Optimizer, the following features are supported:

- Improves user experience through computer usage analysis and learning
- Faster application launch and seamless application transition
- Intelligent battery run-time extension
- Optimized Audio for best meeting experience
- Locks computer when walks away for enhanced security
- Faster computer wake-on-user approach
- Intelligently shows alerts
- Updates automatically to minimize disruption

For more information about configuring and using these features, refer [Dell Optimizer documentation](#).

Working inside your computer

Safety instructions

Use the following safety guidelines to protect your computer from potential damage and to ensure your personal safety. Unless otherwise noted, each procedure included in this document assumes that you have read the safety information that shipped with your computer.

-  **WARNING:** Before working inside your computer, read the safety information that is shipped with your computer. For more safety best practices, see the Regulatory Compliance home page at www.dell.com/regulatory_compliance.
-  **WARNING:** Disconnect your computer from all power sources before opening the computer cover or panels. After you finish working inside the computer, replace all covers, panels, and screws before connecting your computer to an electrical outlet.
-  **CAUTION:** To avoid damaging the computer, ensure that the work surface is flat, dry, and clean.
-  **CAUTION:** To avoid damaging the components and cards, handle them by their edges, and avoid touching the pins and the contacts.
-  **CAUTION:** You should only perform troubleshooting and repairs as authorized or directed by the Dell technical assistance team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. See the safety instructions that is shipped with the product or at www.dell.com/regulatory_compliance.
-  **CAUTION:** Before touching anything inside your computer, ground yourself by touching an unpainted metal surface, such as the metal at the back of the computer. While you work, periodically touch an unpainted metal surface to dissipate static electricity which could harm internal components.
-  **CAUTION:** When you disconnect a cable, pull it by its connector or its pull tab, not the cable itself. Some cables have connectors with locking tabs or thumbscrews that you must disengage before disconnecting the cable. When disconnecting cables, keep them evenly aligned to avoid bending the connector pins. When connecting cables, ensure that the ports and the connectors are correctly oriented and aligned.
-  **CAUTION:** Press and eject any installed card from the media-card reader.
-  **CAUTION:** Exercise caution when handling rechargeable Li-ion batteries in laptops. Swollen batteries should not be used and should be replaced and disposed properly.
-  **NOTE:** The color of your computer and certain components may appear differently than shown in this document.

Before working inside your computer

Steps

1. Save and close all open files and exit all open applications.
2. Shut down your computer. For Windows operating system, click **Start** >  **Power** > **Shut down**.
 -  **NOTE:** If you are using a different operating system, see the documentation of your operating system for shut-down instructions.
3. Disconnect your computer and all attached devices from their electrical outlets.
4. Disconnect all attached network devices and peripherals, such as keyboard, mouse, and monitor from your computer.

5. Remove any media card and optical disk from your computer, if applicable.
6. Enter the service mode, if you are able to power on your computer.

Service Mode

Service Mode is used to cut-off power, without disconnecting battery cable from system board prior conducting repairs in the computer.

CAUTION: If you are unable to turn on the computer to put it into Service Mode or the computer does not support Service Mode then proceed to disconnect the battery cable. To disconnect the battery cable, follow the steps in [Removing the battery](#).

NOTE: Ensure that your computer is shut down and the AC adapter is disconnected.

- a. Hold **** key on the keyboard and press the power button for 3 seconds or until the Dell logo appears on the screen.
- b. Press any key to continue.
- c. If the AC adapter is not disconnected, a message prompting you to remove the AC adapter appears on the screen. Remove the AC adapter and then press any key to continue the **Service Mode** procedure. The **Service Mode** procedure automatically skips the following step if the **Owner Tag** of the computer is not set up in advance by the user.
- d. When the ready-to-proceed message appears on the screen, press any key to proceed. The computer emits three short beeps and shuts down immediately.
- e. Once the computer shuts down, it has successfully entered Service Mode.

NOTE: If you are unable to power on your computer or unable to enter service mode skip this process.

Safety precautions

The safety precautions chapter details the primary steps to be taken before performing any disassembly instructions.

Observe the following safety precautions before you perform any installation or break/fix procedures involving disassembly or reassembly:

- Turn off the system and all attached peripherals.
- Disconnect the system and all attached peripherals from AC power.
- Disconnect all network cables, telephone, and telecommunications lines from the system.
- Use an ESD field service kit when working inside any notebook to avoid electrostatic discharge (ESD) damage.
- After removing any system component, carefully place the removed component on an anti-static mat.
- Wear shoes with non-conductive rubber soles to reduce the chance of getting electrocuted.

Standby power

Dell products with standby power must be unplugged before you open the case. Systems that incorporate standby power are essentially powered while turned off. The internal power enables the system to be remotely turned on (wake on LAN) and suspended into a sleep mode and has other advanced power management features.

Unplugging, pressing, and holding the power button for 15 seconds should discharge residual power in the system board.

Bonding

Bonding is a method for connecting two or more grounding conductors to the same electrical potential. This is done through the use of a field service electrostatic discharge (ESD) kit. When connecting a bonding wire, ensure that it is connected to bare metal and never to a painted or non-metal surface. The wrist strap should be secure and in full contact with your skin, and ensure that you remove all jewelry such as watches, bracelets, or rings prior to bonding yourself and the equipment.

Electrostatic discharge—ESD protection

ESD is a major concern when you handle electronic components, especially sensitive components such as expansion cards, processors, memory DIMMs, and system boards. Very slight charges can damage circuits in ways that may not be obvious, such as intermittent problems or a shortened product life span. As the industry pushes for lower power requirements and increased density, ESD protection is an increasing concern.

Due to the increased density of semiconductors used in recent Dell products, the sensitivity to static damage is now higher than in previous Dell products. For this reason, some previously approved methods of handling parts are no longer applicable.

Two recognized types of ESD damage are catastrophic and intermittent failures.

- **Catastrophic** – Catastrophic failures represent approximately 20 percent of ESD-related failures. The damage causes an immediate and complete loss of device functionality. An example of catastrophic failure is a memory DIMM that has received a static shock and immediately generates a "No POST/No Video" symptom with a beep code emitted for missing or nonfunctional memory.
- **Intermittent** – Intermittent failures represent approximately 80 percent of ESD-related failures. The high rate of intermittent failures means that most of the time when damage occurs, it is not immediately recognizable. The DIMM receives a static shock, but the tracing is merely weakened and does not immediately produce outward symptoms related to the damage. The weakened trace may take weeks or months to melt, and in the meantime may cause degradation of memory integrity, intermittent memory errors, etc.

The more difficult type of damage to recognize and troubleshoot is the intermittent (also called latent or "walking wounded") failure.

Perform the following steps to prevent ESD damage:

- Use a wired ESD wrist strap that is properly grounded. The use of wireless anti-static straps is no longer allowed; they do not provide adequate protection. Touching the chassis before handling parts does not ensure adequate ESD protection on parts with increased sensitivity to ESD damage.
- Handle all static-sensitive components in a static-safe area. If possible, use anti-static floor pads and workbench pads.
- When unpacking a static-sensitive component from its shipping carton, do not remove the component from the anti-static packing material until you are ready to install the component. Before unwrapping the anti-static packaging, ensure that you discharge static electricity from your body.
- Before transporting a static-sensitive component, place it in an anti-static container or packaging.

ESD field service kit

The unmonitored Field Service kit is the most commonly used service kit. Each Field Service kit includes three main components: anti-static mat, wrist strap, and bonding wire.

Components of an ESD field service kit

The components of an ESD field service kit are:

- **Anti-Static Mat** – The anti-static mat is dissipative and parts can be placed on it during service procedures. When using an anti-static mat, your wrist strap should be snug and the bonding wire should be connected to the mat and to any bare metal on the system being worked on. Once deployed properly, service parts can be removed from the ESD bag and placed directly on the mat. ESD-sensitive items are safe in your hand, on the ESD mat, in the system, or inside a bag.
- **Wrist Strap and Bonding Wire** – The wrist strap and bonding wire can be either directly connected between your wrist and bare metal on the hardware if the ESD mat is not required, or connected to the anti-static mat to protect hardware that is temporarily placed on the mat. The physical connection of the wrist strap and bonding wire between your skin, the ESD mat, and the hardware is known as bonding. Use only Field Service kits with a wrist strap, mat, and bonding wire. Never use wireless wrist straps. Always be aware that the internal wires of a wrist strap are prone to damage from normal wear and tear, and must be checked regularly with a wrist strap tester in order to avoid accidental ESD hardware damage. It is recommended to test the wrist strap and bonding wire at least once per week.
- **ESD Wrist Strap Tester** – The wires inside of an ESD strap are prone to damage over time. When using an unmonitored kit, it is a best practice to regularly test the strap prior to each service call, and at a minimum, test once per week. A wrist strap tester is the best method for doing this test. If you do not have your own wrist strap tester, check with your regional office to find out if they have one. To perform the test, plug the wrist-strap's bonding-wire into the tester while it is strapped to your wrist and push the button to test. A green LED is lit if the test is successful; a red LED is lit and an alarm sounds if the test fails.
- **Insulator Elements** – It is critical to keep ESD sensitive devices, such as plastic heat sink casings, away from internal parts that are insulators and often highly charged.
- **Working Environment** – Before deploying the ESD Field Service kit, assess the situation at the customer location. For example, deploying the kit for a server environment is different than for a desktop or portable environment. Servers are typically installed in a rack within a data center; desktops or portables are typically placed on office desks or cubicles. Always look for a large open flat work area that is free of clutter and large enough to deploy the ESD kit with additional space to accommodate the type of system that is being repaired. The workspace should also be free of insulators that can cause an ESD event. On the work area, insulators such as Styrofoam and other plastics should always be moved at least 12 inches or 30 centimeters away from sensitive parts before physically handling any hardware components

- **ESD Packaging** – All ESD-sensitive devices must be shipped and received in static-safe packaging. Metal, static-shielded bags are preferred. However, you should always return the damaged part using the same ESD bag and packaging that the new part arrived in. The ESD bag should be folded over and taped shut and all the same foam packing material should be used in the original box that the new part arrived in. ESD-sensitive devices should be removed from packaging only at an ESD-protected work surface, and parts should never be placed on top of the ESD bag because only the inside of the bag is shielded. Always place parts in your hand, on the ESD mat, in the system, or inside an anti-static bag.
- **Transporting Sensitive Components** – When transporting ESD sensitive components such as replacement parts or parts to be returned to Dell, it is critical to place these parts in anti-static bags for safe transport.

ESD protection summary

It is recommended to use the traditional wired ESD grounding wrist strap and protective anti-static mat at all times when servicing Dell products. In addition, it is critical to keep sensitive parts separate from all insulator parts while performing service and that they use anti-static bags for transporting sensitive components.

Transporting sensitive components

When transporting ESD sensitive components such as replacement parts or parts to be returned to Dell, it is critical to place these parts in anti-static bags for safe transport.

After working inside your computer

About this task

 **CAUTION:** Leaving stray or loose screws inside your computer may severely damage your computer.

Steps

1. Replace all screws and ensure that no stray screws remain inside your computer.
2. Connect any external devices, peripherals, or cables you removed before working on your computer.
3. Replace any media cards, discs, or any other parts that you removed before working on your computer.
4. Connect your computer and all attached devices to their electrical outlets.
 - ① **NOTE:** To exit service mode, ensure to connect the AC adapter to the power-adaptor port on your computer.
5. Press the power button to turn on the computer. Your computer will automatically return to normal functioning mode.

BitLocker

 **CAUTION:** If BitLocker is not suspended before updating the BIOS, the next time you reboot the system it will not recognize the BitLocker key. You will then be prompted to enter the recovery key to progress, and the system will ask for this on each reboot. If the recovery key is not known this can result in data loss or an unnecessary operating system reinstall. For more information about this subject, see Knowledge Article: [updating the BIOS on Dell systems with BitLocker enabled](#).

The installation of the following components triggers BitLocker:

- Hard disk drive or solid state drive
- System board

Recommended tools

The procedures in this document may require the following tools:

- Phillips screwdriver #0
- Phillips screwdriver #1
- Torx #5 (T5) screwdriver

- Plastic scribe

Screw list

- i** **NOTE:** When removing screws from a component, it is recommended to note the screw type, the quantity of screws, and then place them in a screw storage box. This is to ensure that the correct number of screws and correct screw type is restored when the component is replaced.
- i** **NOTE:** Some computers have magnetic surfaces. Ensure that the screws are not left attached to such surfaces when replacing a component.
- i** **NOTE:** Screw color may vary with the configuration ordered.

Removing and installing Customer Replaceable Units (CRUs)

The replaceable components in this chapter are Customer Replaceable Units (CRUs).

CAUTION: Customers can replace only the Customer Replaceable Units (CRUs) following the safety precautions and replacement procedures.

NOTE: The images in this document may differ from your computer depending on the configuration you ordered.

Secure Digital (SD) Card

Removing the SD card

Prerequisites

Follow the procedure in [Before working inside your computer](#).

NOTE: Ensure that your computer is in Service Mode. For more information see, step 6 in [Before working inside your computer](#).

About this task

The following image indicates the location and provides a visual representation of the SD card removal procedure.

Steps

1. Push the SD card to eject it from the slot.
2. Remove the SD card from the computer.

Installing the SD card

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following image provides a visual representation of the SD card installation procedure.

Steps

Insert the SD card into its slot until it click into place.

Next steps

1. Follow the procedure in [After working inside your computer](#).

Removing and installing Field Replaceable Units (FRUs)

The replaceable components in this chapter are Field Replaceable Units (FRUs).

CAUTION: The information in this section is intended for authorized service technicians only.

CAUTION: To avoid any potential damage to the component or loss of data, ensure that an authorized service technician replaces the Field Replaceable Units (FRUs).

CAUTION: Dell Technologies recommends that this set of repairs, if needed, to be conducted by trained technical repair specialists.

CAUTION: As a reminder, your warranty does not cover damages that may occur during the courses of FRU repairs that are not authorized by Dell Technologies.

NOTE: The images in this document may differ from your computer depending on the configuration you ordered.

Base cover

Removing the base cover

Prerequisites

1. Follow the procedure in [Before working inside your computer](#).

NOTE: Ensure that your computer is in Service Mode. For more information see, step 6 in [Before working inside your computer](#).

2. Remove the [SD card](#).

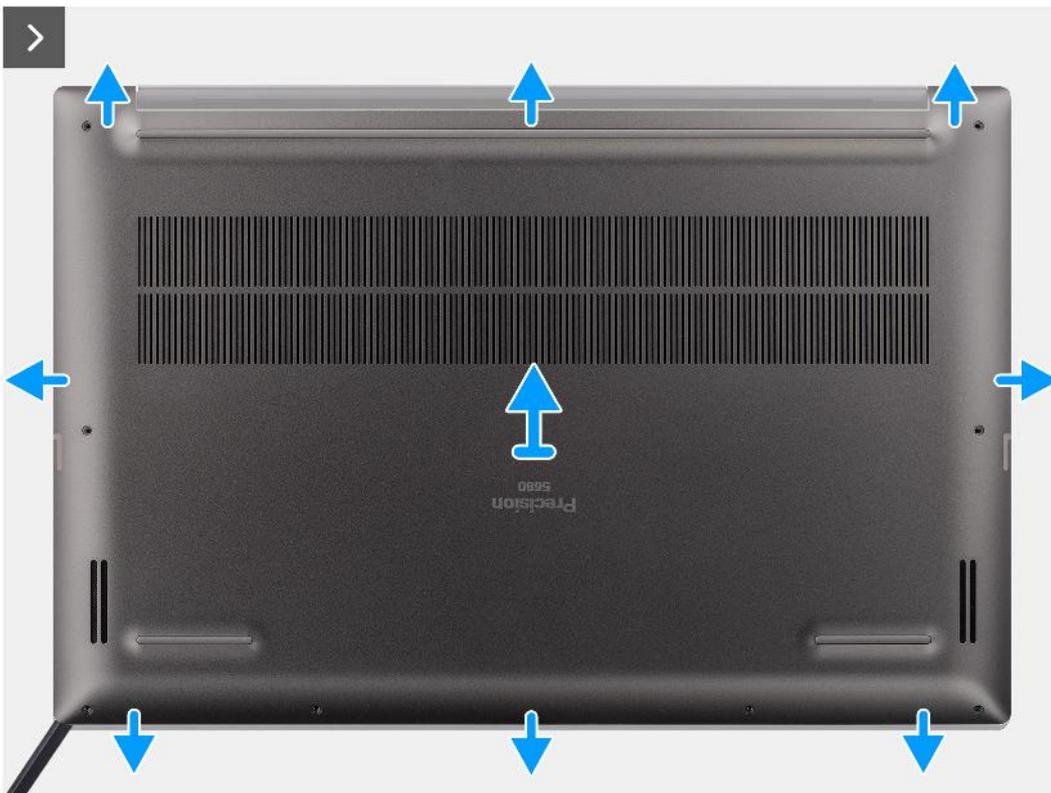

About this task

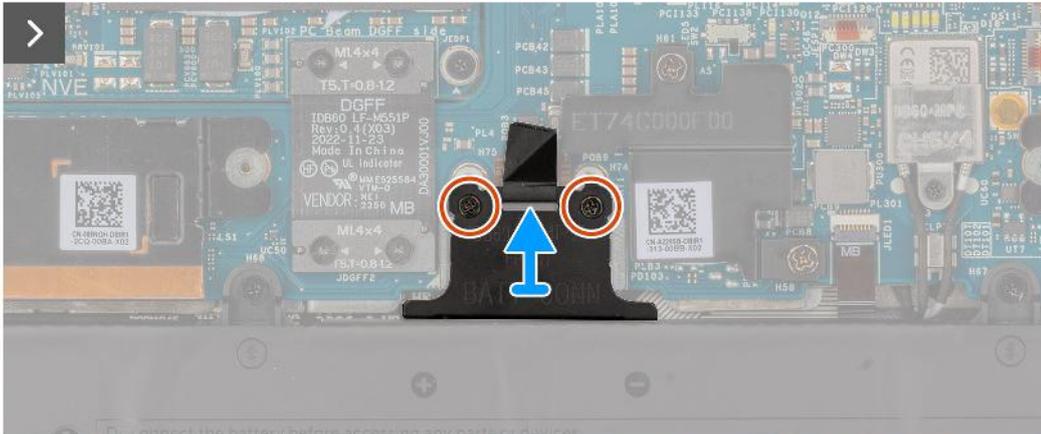

CAUTION: The information in this removal section is intended for authorized service technicians only.

The following images indicate the location and provide a visual representation of the base cover removal procedure.

8x
M2x3

Steps

1. Remove the eight (M2x3) T5 Torx screws that secure the base cover to the computer.
2. Using a plastic scribe, pry open the base cover starting from the SD-card slot on the base cover.
 - ⚠ **CAUTION:** Do not fully insert the plastic scribe into the SD-card slot before prying. Only pry the edge of base cover nearest to the SD-card slot opening.
 - ⚠ **CAUTION:** Do not pry up from the top side (near the vents) of the base cover as this may cause damage to the rear side of the cover.
3. Work your way around the bottom, left and right sides of the base cover.
4. Lift the bottom of the base cover and push it towards the rear of the system to remove it from the computer.
 - ⚠ **CAUTION:** Do not grasp from the rear vents and lift the base cover directly upwards to remove it, as this may cause damage to the rear side of the cover.
5. Loosen the two captive screws that secure the battery connector bracket in place.
6. Disconnect the battery FPC cable from the connector on the system board.
 - 📌 **NOTE:** Pull the pull tab vertically to disconnect the battery FPC cable.

Installing the base cover

Prerequisites

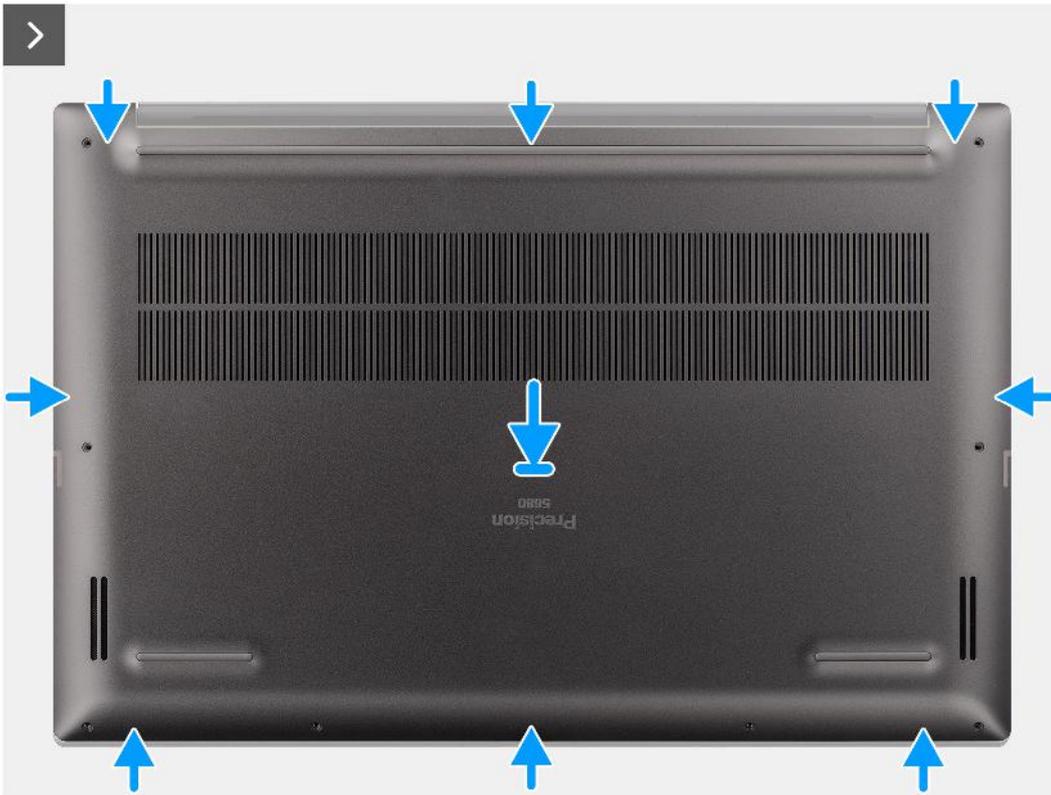

If you are replacing a component, remove the necessary component before the installation procedure.

About this task

CAUTION: The information in this installation section is intended for authorized service technicians only.

The following images indicate the location and provide a visual representation of the base cover installation procedure.

8x
M2x3

Steps

1. Connect the battery FPC cable to the connector on the system board.
2. Tighten the two captive screws to secure the battery connector bracket in place.
3. Align and place the base cover on the palm-rest assembly, and snap the base cover into place.
4. Replace the eight (M2x3) T5 Torx screws to secure the base cover to the computer.

Next steps

1. Install the [SD card](#).
2. Follow the procedure in [After working inside your computer](#).

Solid-state drive

Removing the M.2 2230 solid-state drive

Prerequisites

1. Follow the procedure in [Before working inside your computer](#).

 **NOTE:** Ensure that your computer is in Service Mode. For more information see, step 6 in [Before working inside your computer](#).

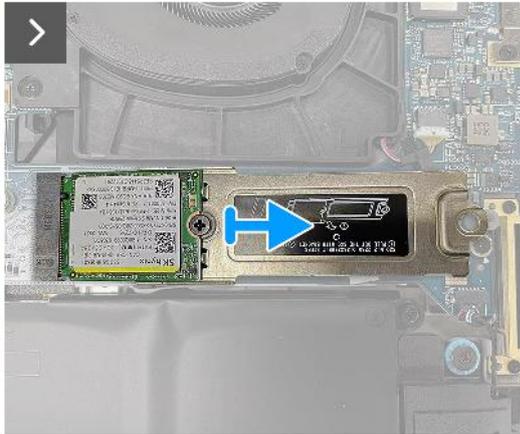

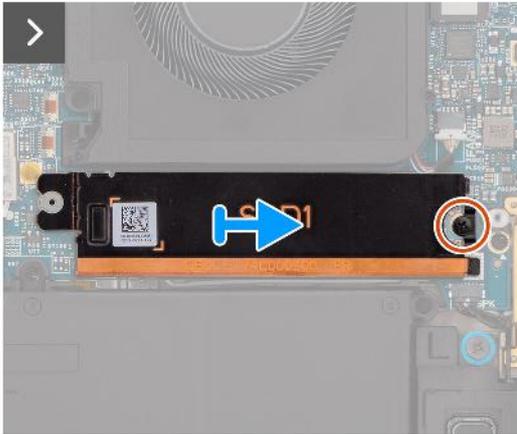

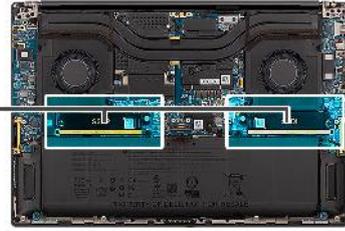

2. Remove the [SD card](#).
3. Remove the [base cover](#).

About this task

 **CAUTION:** The information in this removal section is intended for authorized service technicians only.

The following images indicate the location of the solid-state drive and provide a visual representation of the removal procedure.

 **NOTE:** The following procedure is applicable for models shipped with an M.2 2230 solid-state drive in the SSD1 and/or SSD2 slot.

Steps

1. Remove the single (M2x2) screw that secures the solid-state drive thermal plate in place.
2. Remove the solid-state drive thermal plate from the system board.
3. Remove the M.2 2230 solid-state drive with the solid-state drive bracket from the system board.
4. Remove the single (M2x2) screw that secures the M.2 2230 solid-state drive to the solid-state drive bracket.
5. Remove the M.2 2230 solid-state drive from the solid-state drive bracket.

Installing the M.2 2230 solid-state drive

Prerequisites

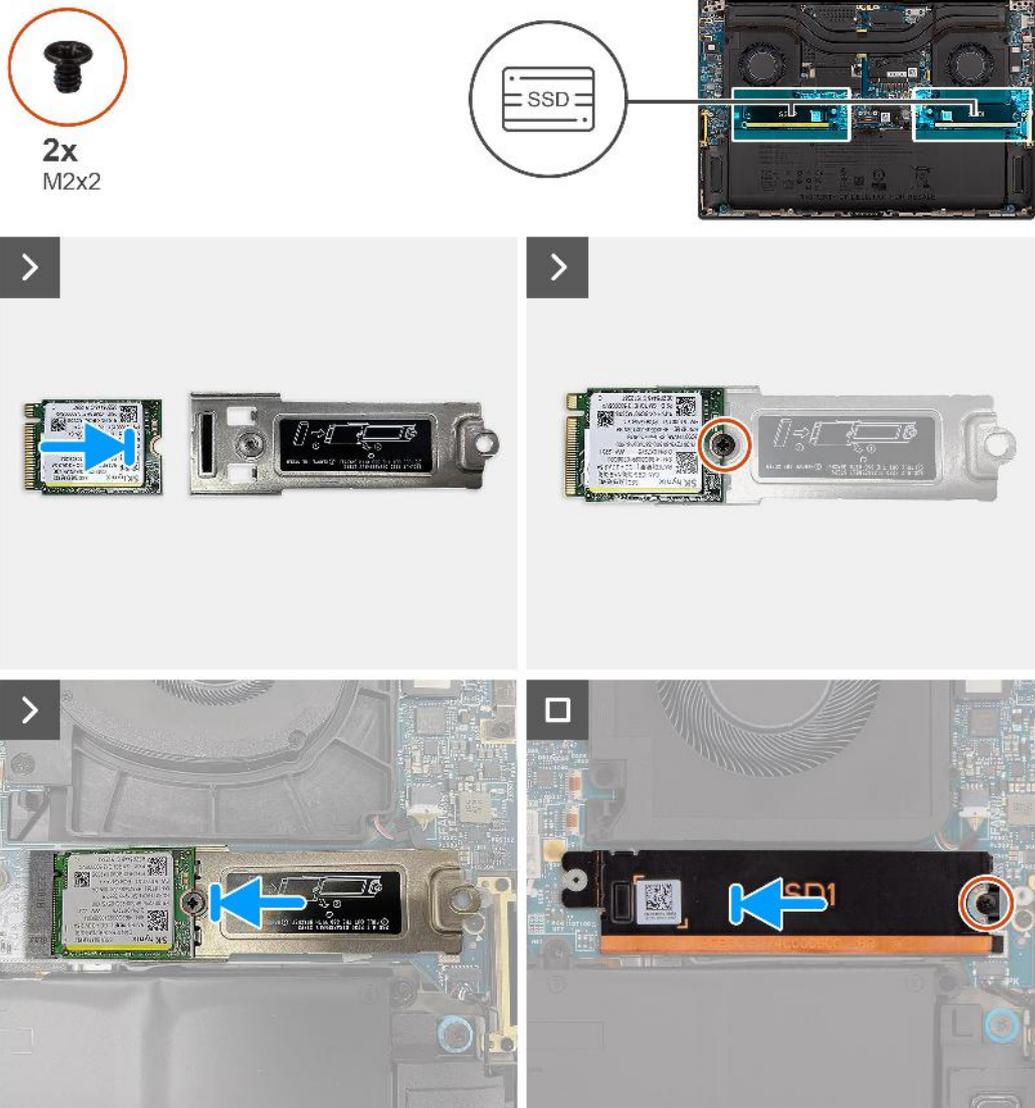

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

⚠ CAUTION: The information in this installation section is intended for authorized service technicians only.

The following image indicates the location of the solid-state drive and provides a visual representation of the installation procedure.

NOTE: The following procedure is applicable for models shipped with an M.2 2230 solid-state drive in the SSD1 and/or SSD2 slot.

Steps

1. Align the screw hole on the M.2 2230 solid-state drive with the screw hole on the solid-state drive bracket.
2. Replace the single (M2x2) screw to secure the M.2 2230 solid-state drive to the solid-state drive bracket.
3. Align the notch on the solid-state drive with the tab on the M.2 card connector.
4. Slide the M.2 2230 solid-state drive with the solid-state drive bracket into the M.2 card connector on the system board.
5. Align and place the solid-state drive thermal plate in place.
6. Replace the single (M2x2) screw to secure the solid-state drive thermal plate to the system board.

Next steps

1. Install the [base cover](#).
2. Install the [SD card](#).
3. Follow the procedure in [After working inside your computer](#).

Removing the M.2 2280 solid-state drive

Prerequisites

1. Follow the procedure in [Before working inside your computer](#).

NOTE: Ensure that your computer is in Service Mode. For more information see, step 6 in [Before working inside your computer](#).

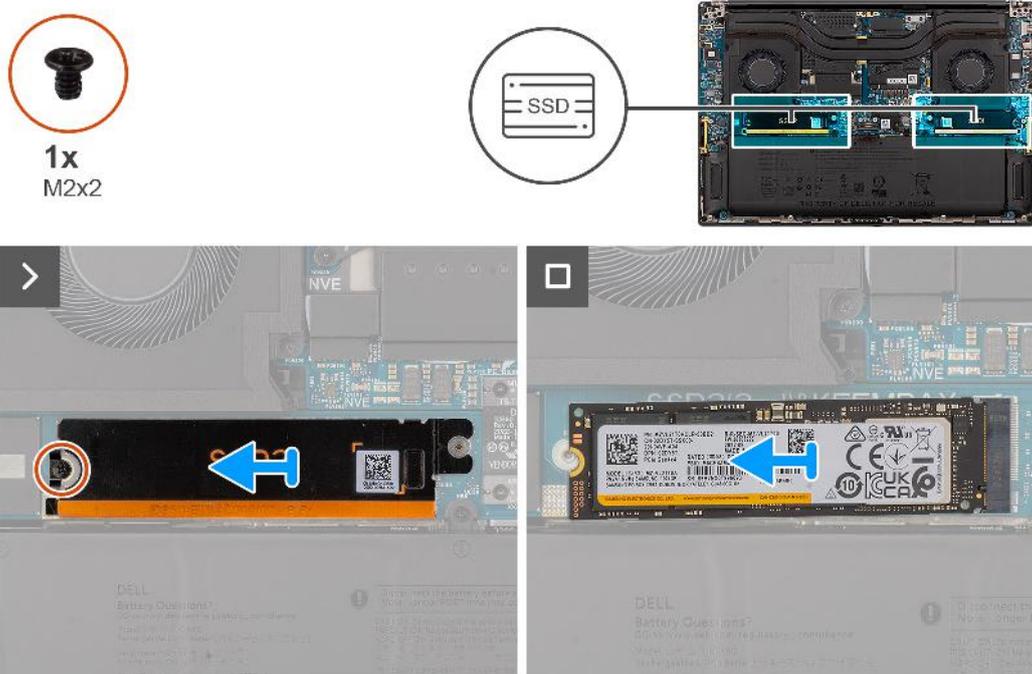

2. Remove the [SD card](#).
3. Remove the [base cover](#).

Battery

Rechargeable Li-ion battery precautions

⚠ CAUTION:

- Exercise caution when handling rechargeable Li-ion batteries.
- Discharge the battery completely before removing it. Disconnect the AC power adapter from the system and operate the computer solely on battery power—the battery is fully discharged when the computer no longer turns on when the power button is pressed.
- Do not crush, drop, mutilate, or penetrate the battery with foreign objects.
- Do not expose the battery to high temperatures, or disassemble battery packs and cells.
- Do not apply pressure to the surface of the battery.
- Do not bend the battery.
- Do not use tools of any kind to pry on or against the battery.
- Ensure any screws during the servicing of this product are not lost or misplaced, to prevent accidental puncture or damage to the battery and other system components.
- If the battery gets stuck inside your computer as a result of swelling, do not try to release it as puncturing, bending, or crushing a rechargeable Li-ion battery can be dangerous. In such an instance, contact Dell technical support for assistance. See www.dell.com/contactdell.
- Always purchase genuine batteries from www.dell.com or authorized Dell partners and resellers.
- Swollen batteries should not be used and should be replaced and disposed properly. For guidelines on how to handle and replace swollen rechargeable Li-ion batteries, see [Handling swollen rechargeable Li-ion batteries](#).

Removing the battery

Prerequisites

1. Follow the procedure in [Before working inside your computer](#).

i **NOTE:** Ensure that your computer is in Service Mode. For more information see, step 6 in [Before working inside your computer](#).

2. Remove the [SD card](#).
3. Remove the [base cover](#).

i **NOTE:** If battery was disconnected from system board for service, there will be a delay during system boot-up as the system will undergo RTC battery reset.

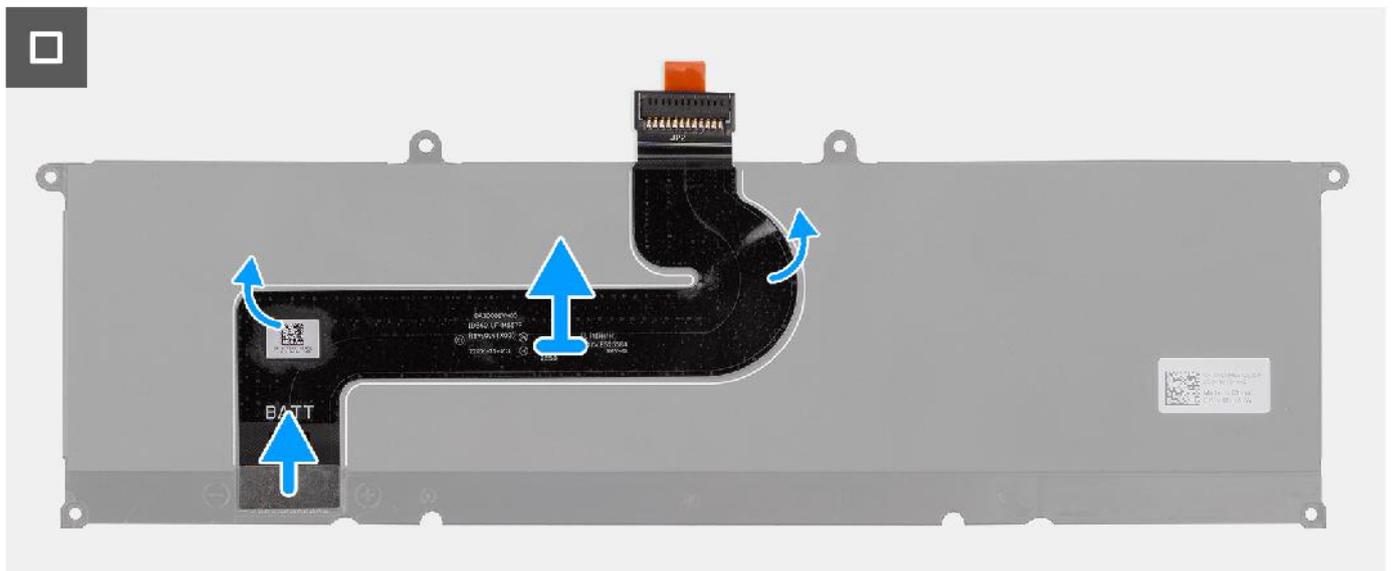

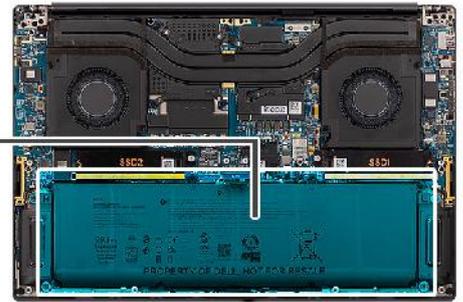

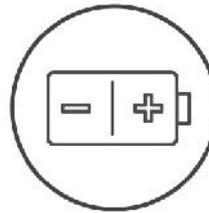

About this task

⚠ CAUTION: The information in this removal section is intended for authorized service technicians only.

The following images indicate the location of the battery and provide a visual representation of the removal procedure.

6x
M2x4

Steps

1. Remove the six (M2x4) screws that secure the battery to the palm-rest assembly.
2. Lift the battery away from the computer.
3. Peel off the battery FPC cable from the battery.
4. Disconnect and remove the battery FPC cable from the connector on the battery.

 **NOTE:** Pull the pull tab vertically to disconnect the battery FPC cable.

NOTE: When system battery is disconnected or completely discharged, the system date and time will be reset. When the system is power on under this condition, it will take slightly more time before the Dell logo is displayed, followed by the Time-of-day not set message. Select BIOS-Setup in the caution screen to configure the date and time.

M2x4

Steps

1. Connect the battery FPC cable to the connector on the battery.
2. Adhere the battery FPC cable on the battery.
3. Align and place the battery into the slot on the chassis.
4. Replace the six (M2x4) screws to secure the battery to the plam-rest assembly.

Next steps

1. Install the [base cover](#).

2. Install the [SD card](#).
3. Follow the procedure in [After working inside your computer](#).

System fan

Removing the left fan

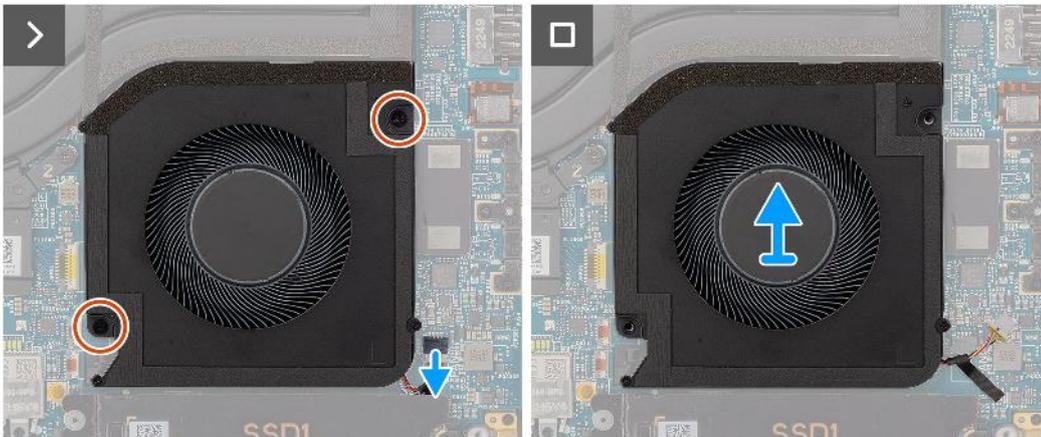

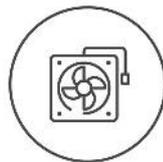

Prerequisites

1. Follow the procedure in [Before working inside your computer](#).
 - NOTE:** Ensure that your computer is in Service Mode. For more information see, step 6 in [Before working inside your computer](#).
2. Remove the [SD card](#).
3. Remove the [base cover](#).

About this task

CAUTION: The information in this removal section is intended for authorized service technicians only.

The following images indicate the location of the left fan and provide a visual representation of the removal procedure.

Steps

1. Disconnect the left-fan cable from the connector on the system board.
2. Remove the two (M2x4) screws that secure the left fan to the palm-rest assembly.
3. Lift the left fan from the outside and remove it from the palm-rest assembly.

Installing the left fan

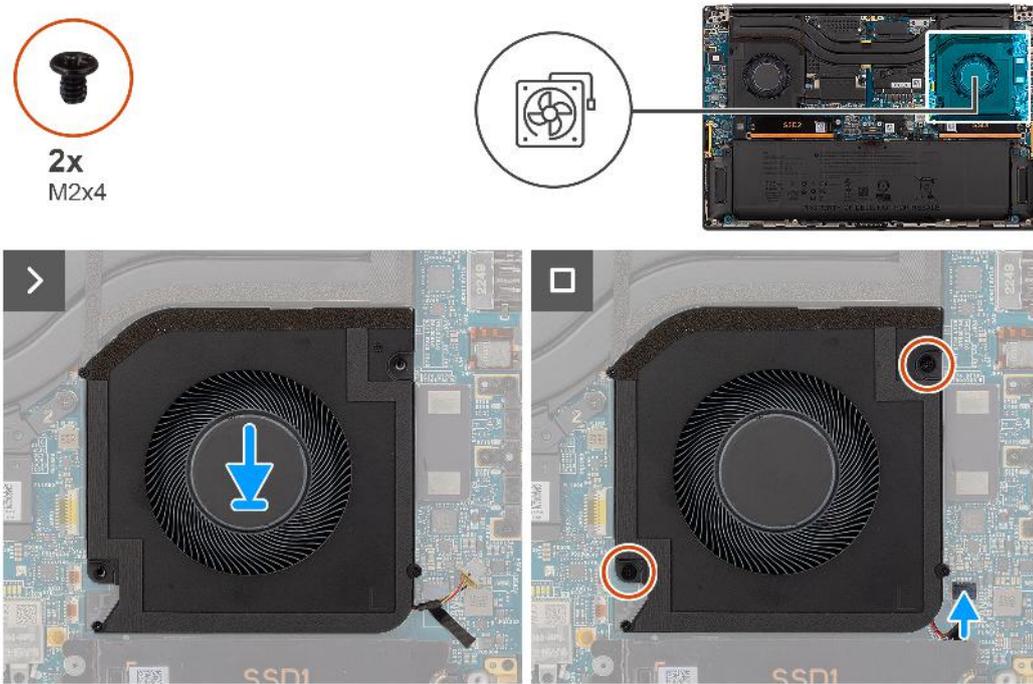

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

CAUTION: The information in this installation section is intended for authorized service technicians only.

The following image indicates the location of the left fan and provides a visual representation of the installation procedure.

Steps

1. Align and place the left-fan onto the palm-rest assembly.
2. Replace the two (M2x4) screws to secure the left fan to the palm-rest assembly.
3. Connect the left fan cable to the connector on the system board.

Next steps

1. Install the [base cover](#).
2. Install the [SD card](#).
3. Follow the procedure in [After working inside your computer](#).

Removing the right fan

Prerequisites

1. Follow the procedure in [Before working inside your computer](#).
NOTE: Ensure that your computer is in Service Mode. For more information see, step 6 in [Before working inside your computer](#).
2. Remove the [SD card](#).
3. Remove the [base cover](#).

Steps

1. Align and place the right-fan onto the palm-rest assembly.
2. Replace the two (M2x4) screws to secure the right fan to the palm-rest assembly.
3. Connect the right fan cable to the connector on the system board.

Next steps

1. Install the [base cover](#).
2. Install the [SD card](#).
3. Follow the procedure in [After working inside your computer](#).

Heat sink

Removing the heat sink

Prerequisites

1. Follow the procedure in [Before working inside your computer](#).
NOTE: Ensure that your computer is in Service Mode. For more information see, step 6 in [Before working inside your computer](#).
2. Remove the [SD card](#).
3. Remove the [base cover](#).

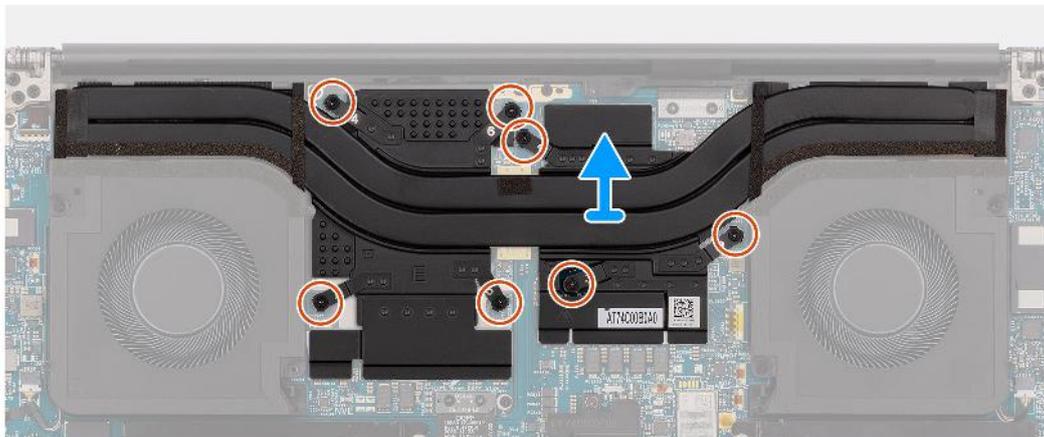

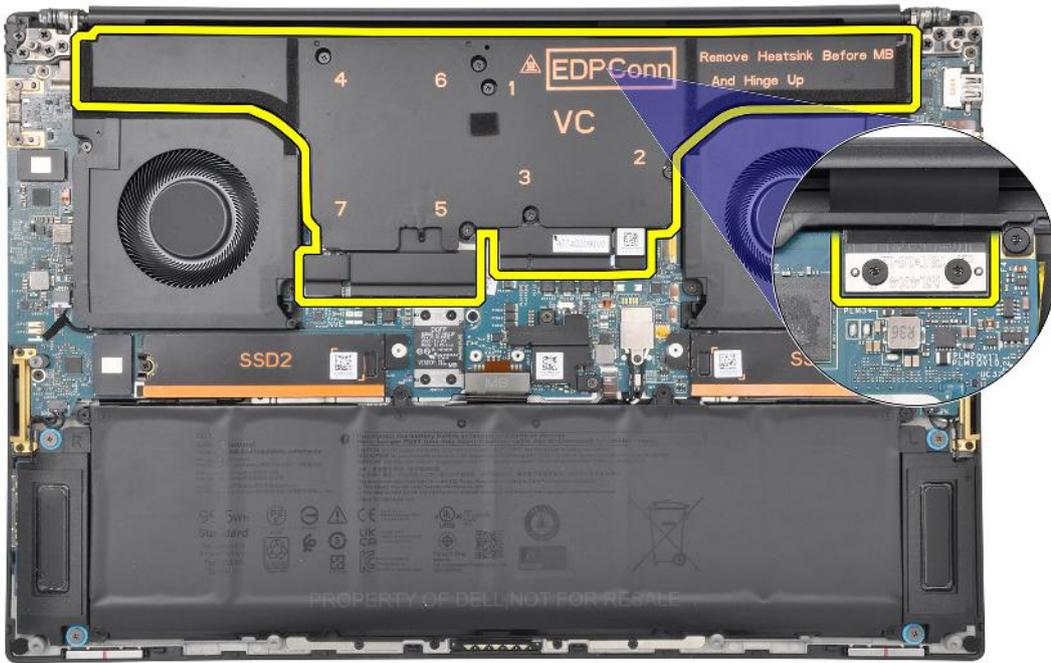

About this task

CAUTION: The information in this removal section is intended for authorized service technicians only.

The following image indicates the location of the heat sink and provides a visual representation of the removal procedure.

NOTE: For models shipped with a heatsink labeled “VC” (Vapor Chamber), the heatsink must be removed prior to removal of the display assembly or system board.

NOTE: For models shipped with a heatsink labeled “VC” (Vapor Chamber), the heatsink covers the display cable:

Steps

1. For systems shipped with an integrated GPU card, loosen the three captive screws in descending order (3>2>1) that secure the heat sink to the system board.
2. For systems shipped with a discrete GPU card, loosen the seven captive screws in descending order (7>6>5>4>3>2>1) that secure the heat sink to the system board.
3. Lift the heat sink off the system board.

NOTE: Thermal pads (thermal conductors) are on the heatsink. If the heatsink is replaced, the new heatsink is shipped with thermal pads. Ensure all thermal pads are in place between the heatsink and the system board.

Installing the heat sink

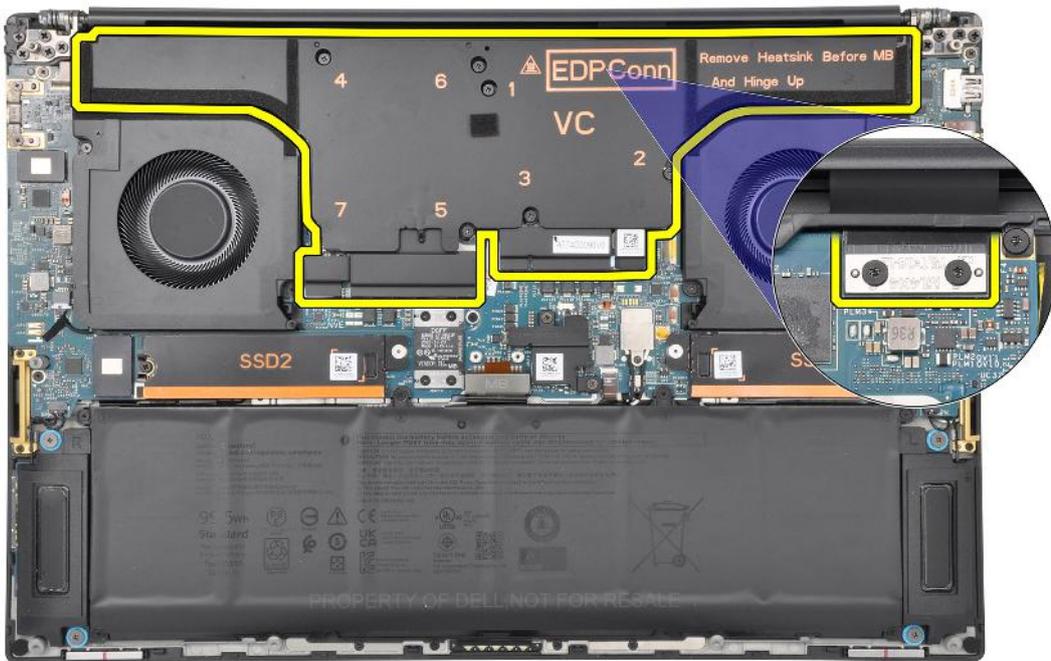

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

The following image indicates the location of the heat sink and provides a visual representation of the installation procedure.

Steps

1. Align the screw holes on the heat sink with the screw holes on the system board.
2. For systems shipped with an integrated GPU card, tighten the three captive screws in ascending order (1>2>3) to secure the heat sink to the system board.
3. For systems shipped with a discrete GPU card, tighten the seven captive screws in ascending order (1>2>3>4>5>6>7) to secure the heat sink to the system board.

Next steps

1. Install the [base cover](#).
2. Install the [SD card](#).
3. Follow the procedure in [After working inside your computer](#).

Display assembly

Removing the display assembly

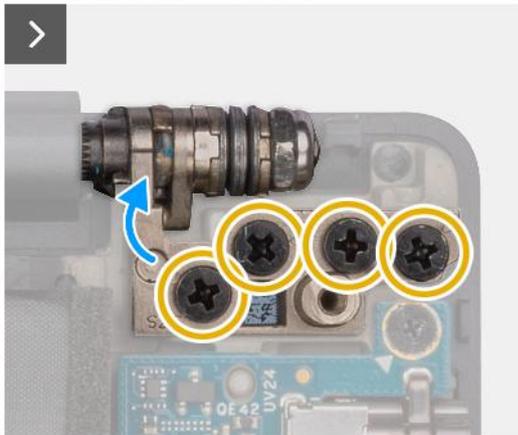

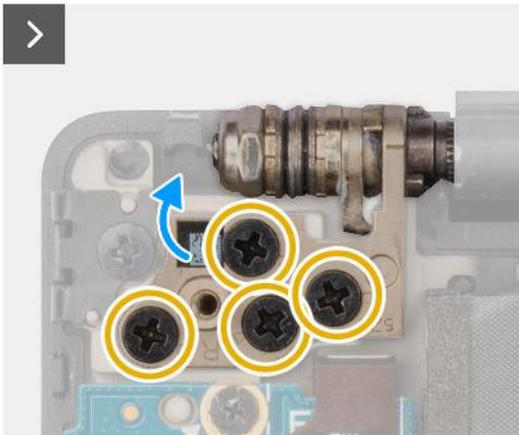

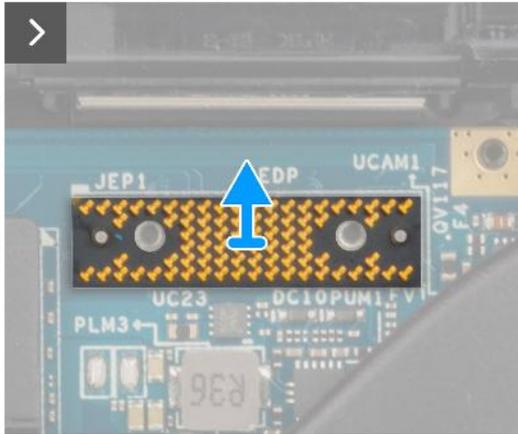

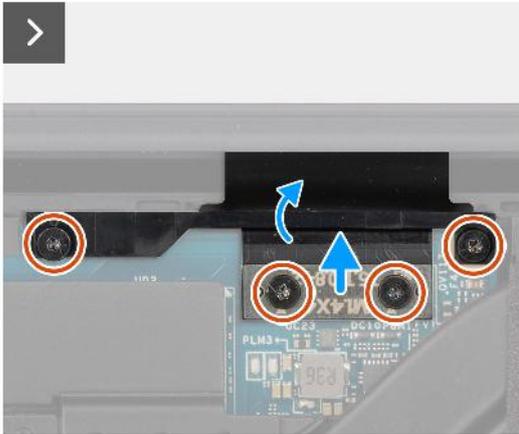

Prerequisites

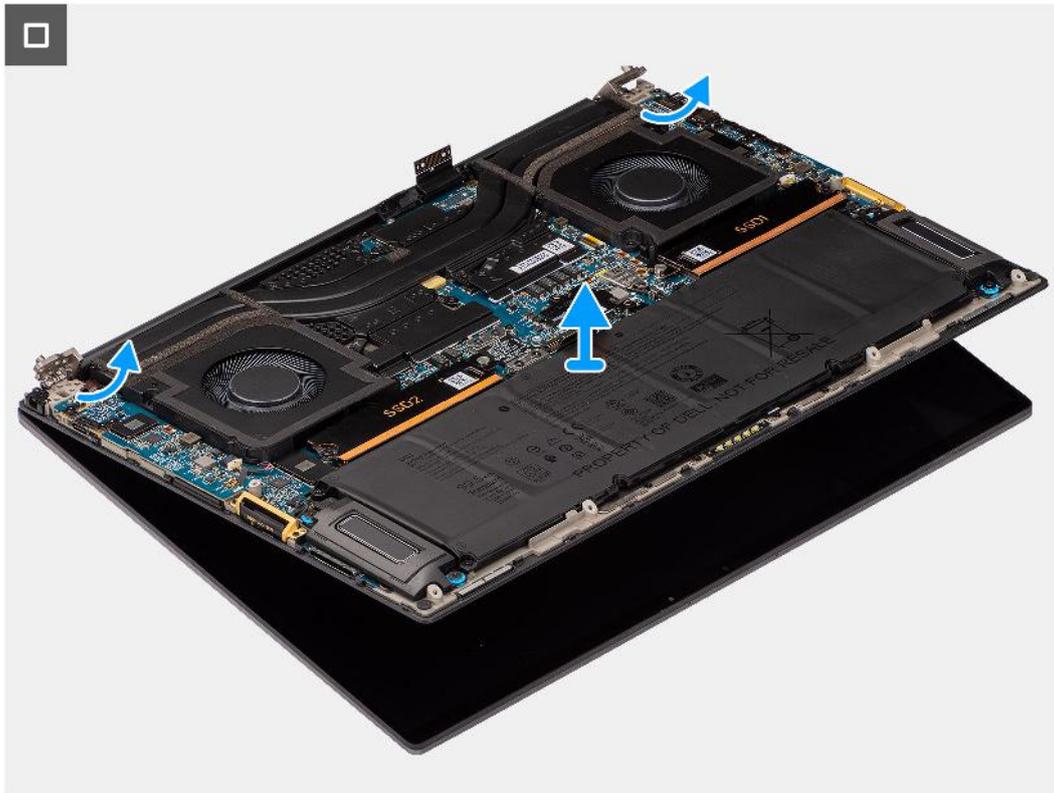

1. Follow the procedure in [Before working inside your computer](#).
 - NOTE:** Ensure that your computer is in Service Mode. For more information see, step 6 in [Before working inside your computer](#).
2. Remove the [SD card](#).
3. Remove the [base cover](#).
4. Remove the [heatsink](#) for systems shipped with vapor chamber VC heatsink.

About this task

CAUTION: The information in this removal section is intended for authorized service technicians only.

The following images indicate the location of the display assembly and provide a visual representation of the removal procedure.

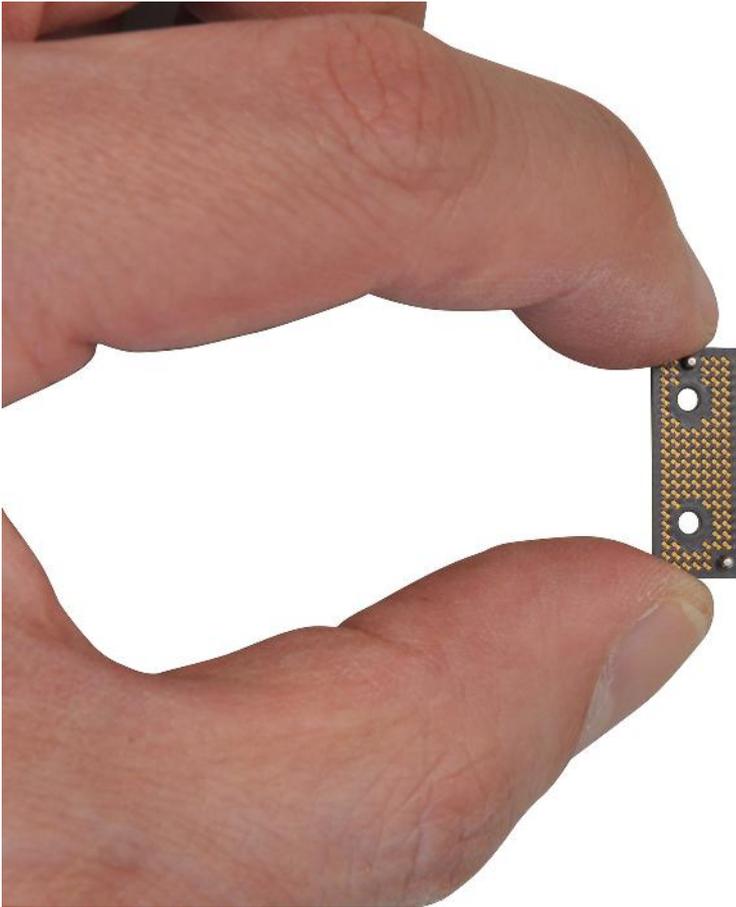

Steps

1. Remove the two (M1.4x4) T5 Torx screws that secure the display FPC cover in place.
2. Flip open the display FPC cover.
3. Remove the two (M1.4x4) T5 Torx screws that secure the display FPC cable in place.
4. Disconnect the display FPC cable from the connector on the system board.
5. Remove the imposter board from the computer.

CAUTION: Technicians must remove the interposer board immediately after disconnecting the display FPC to prevent the board from falling out of the computer during subsequent removal procedures. The pins on the interposer board are very fragile. Avoid contact with the pins on the board, instead handle the board by lifting and holding from the edges or the sides.

6. Remove the eight (M2.5x5) screws that secure the display assembly to the computer.
7. Slightly lift the bottom assembly and slide it to the left and away from the display assembly. Remove the display assembly from the computer.

i **NOTE:** The display assembly is a Hinge-Up Design (HUD) assembly and cannot be further disassembled once it is removed from the bottom chassis. If any components in the display assembly are malfunctioning and need to be replaced, replace the entire display assembly.

Installing the display assembly

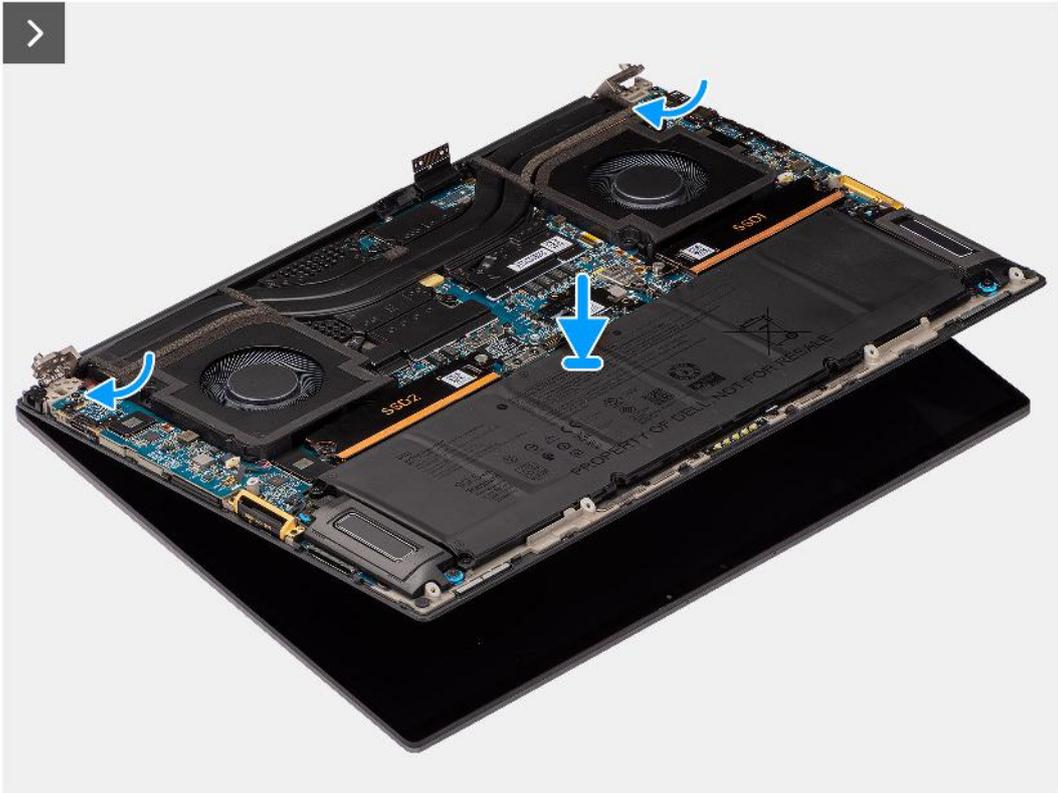

Prerequisites

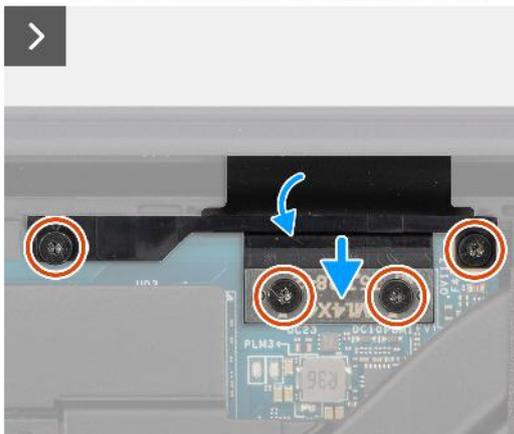

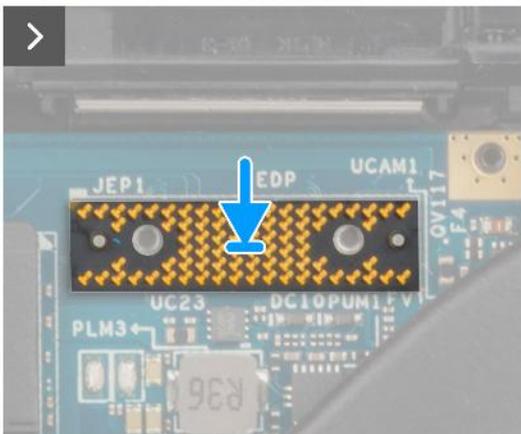

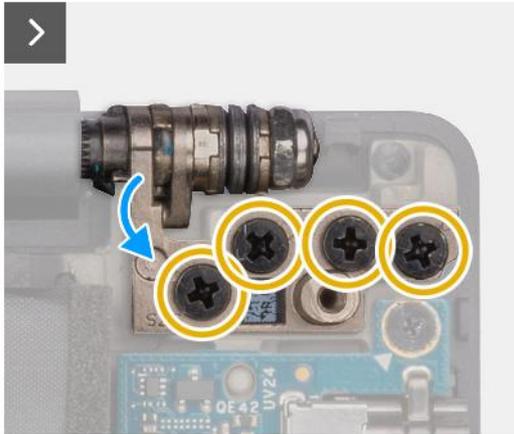

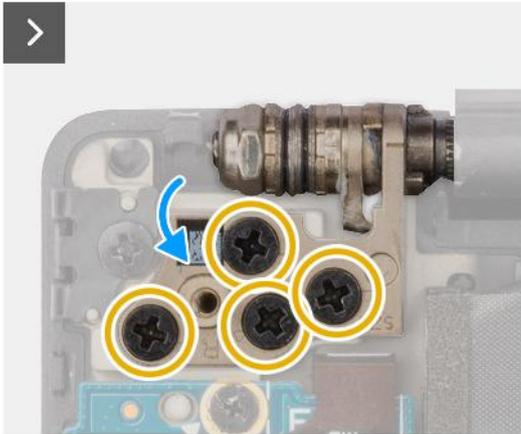

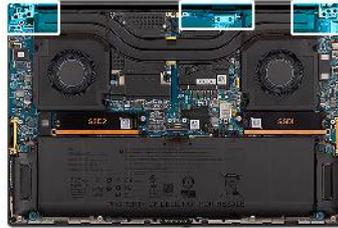

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

⚠ CAUTION: The information in this installation section is intended for authorized service technicians only.

The following image indicates the location of the display assembly and provides a visual representation of the installation procedure.

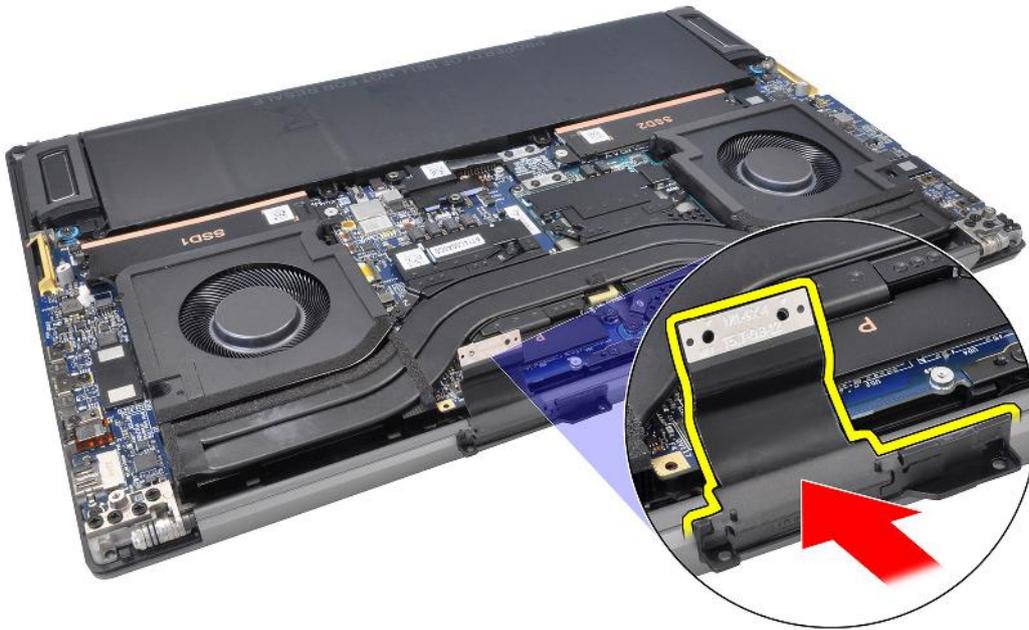

Steps

1. Align and place the bottom assembly under the hinges of the display assembly.
2. Replace the eight (M2.5x5) screws to secure the display assembly to the computer.
3. Align and place the imposter board on the computer.

CAUTION: The pins on the interposer board are very fragile. Avoid contact with the pins on the board, instead handle the board by lifting and holding from the edges or the sides.

4. Connect the display FPC cable to the connector on the system board.

- NOTE:** Tuck the display FPC into the gap between the system board and the palm-rest before connecting the display FPC to the system board.

5. Replace the two (M1.4x4) T5 Torx screws to secure the display FPC cable in place.
6. Flip close the display FPC cover.
7. Replace the two (M1.4x4) T5 Torx screws to secure the display FPC cover in place.

Next steps

1. Install the [heatsink](#) for systems shipped with vapor chamber VC heatsink.
2. Install the [base cover](#).
3. Install the [SD card](#).
4. Follow the procedure in [After working inside your computer](#).

SD-card reader daughterboard

Removing the SD-card reader daughterboard

Prerequisites

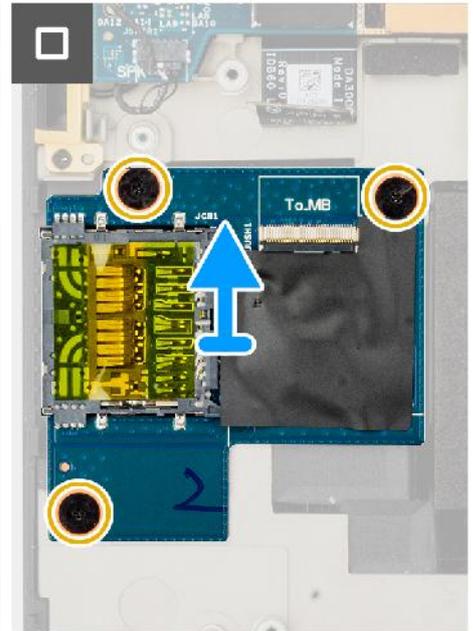

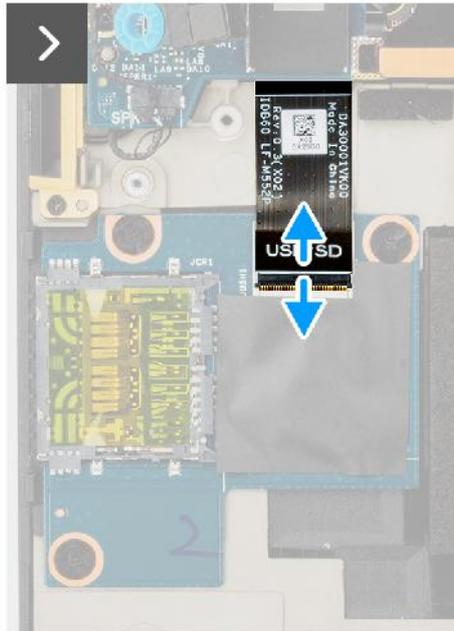

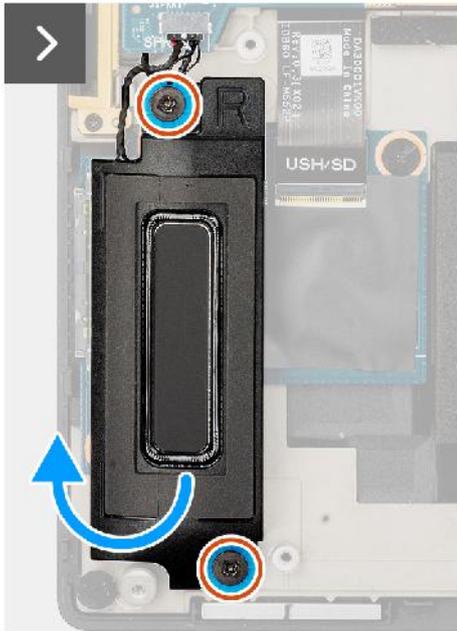

1. Follow the procedure in [Before working inside your computer](#).
 - NOTE:** Ensure that your computer is in Service Mode. For more information see, step 6 in [Before working inside your computer](#).
2. Remove the [SD card](#).
3. Remove the [base cover](#).
4. Remove the [battery](#).

About this task

CAUTION: The information in this removal section is intended for authorized service technicians only.

NOTE: The following procedure is applicable for computers shipped without a USH module only.

The following images indicate the location of the SD-card reader daughterboard and provide a visual representation of the removal procedure.

Steps

1. Remove the two (M1.6x1.8) screws that secure the right speaker in place.
2. Slightly lift the right speaker from the palm-rest assembly.

CAUTION: Do not completely remove the right speaker, as it is still attached to the tweeter underneath the system board.

3. Disconnect the SD-card reader daughterboard FFC from the connector on the SD-card reader daughterboard.
4. Remove the three (M2x1.5) screws that secure the SD-card reader daughterboard to the palm-rest assembly.
5. Lift and remove the SD-card reader daughterboard from the palm-rest assembly.

Steps

1. For systems shipped with a GPU card, remove the four (M1.4x4) T5 Torx screws that secure the GPU card FPC in place.
2. For systems shipped with a GPU card, remove the GPU card FPC from the system board.
3. For systems shipped with a GPU card, remove the two GPU card FPC imposter boards from the system board.
4. For systems shipped with a GPU card, remove the four (M1.6x4.5) screws that secure the GPU card bridge in place.
5. For systems shipped with a GPU card, remove the GPU card bridge from the system board.
6. For systems shipped with a WLAN card, loosen the captive screw that secures the WLAN bracket in place.
7. For systems shipped with a WLAN card, remove the WLAN bracket from the system board.
8. For systems shipped with a WLAN card, disconnect the antenna cables from the connectors on the WLAN module.
9. For systems shipped with a WLAN card, unroute the antenna cables from the metal clips on the system board.
10. Remove the two (M1.4x4) screws that secure the display FPC cover in place.
11. Flip open the display FPC cover.
12. Remove the two (M1.4x4) T5 Torx screws that secure the display FPC in place.
13. Disconnect the display FPC cable from the connector on the system board.
14. Remove the display FPC imposter board from the system board.

i NOTE: Technicians must remove the interposer board immediately after disconnecting the display FPC to prevent the board from falling out of the system during subsequent removal procedures. The pins on the interposer board are very fragile. Avoid contact with the pins on the board, instead handle the board by lifting and holding from the edges or the sides.

15. For systems shipped without a USH module, disconnect the SD-card reader daughterboard FPC cable from the connector on the SD-card reader daughterboard.
16. For systems shipped with a USH module, disconnect the USH and SD-card reader daughterboard FPC cable from the connector on the USH and SD-card reader daughterboard.
17. Disconnect the touchpad FPC cable from the connector on the touchpad module.
18. Peel the SD-card reader daughterboard FPC/USH and SD-card reader daughterboard FPC cable and touchpad FPC cable from the palm-rest assembly.
19. Disconnect the power button with fingerprint reader FPC cable, right speaker cable, front LED FPC cable, and left speaker cable from the connectors on the system board.
20. Remove the two (M2x4) screws that secure the PC bridge support bracket in place.
21. Remove the PC bridge support bracket from the system board.
22. Remove the nine (M2x4) screws that secure the system board to the palm-rest assembly.
23. Remove the system board off the chassis.

i **NOTE:** Replacement of the system board requires further removal of the touchpad FPC and SD-Card reader daughterboard FPC/USH and SD-Card reader daughterboard FPC. Refer disassembly procedures of touchpad and SD card reader daughterboard FPC/USH and SD-card reader daughterboard FPC for more information.

Software

This chapter details the supported operating systems along with instructions on how to install the drivers.

Operating system

Your Dell Precision 5680 supports the following operating systems:

- Windows 11 Home, 64-bit
- Windows 11 Pro, 64-bit
- Windows 11 Pro for Workstation, 64-bit
- Windows 11 Pro for Education, 64-bit
- Windows 11 Enterprise, 64-bit
- Ubuntu 22.04 LTS, 64-bit

Drivers and downloads

When troubleshooting, downloading or installing drivers it is recommended that you read the Dell Knowledge Base article, Drivers and Downloads FAQ [000123347](#).

BIOS setup

CAUTION: Unless you are an expert computer user, do not change the settings in the BIOS Setup program. Certain changes can make your computer work incorrectly.

NOTE: Depending on the computer and its installed devices, the items listed in this section may or may not be displayed.

NOTE: Before you change BIOS Setup program, it is recommended that you write down the BIOS Setup program screen information for future reference.

Use the BIOS Setup program for the following purposes:

- Get information about the hardware installed in your computer, such as the amount of RAM and the size of the hard drive.
- Change the system configuration information.
- Set or change a user-selectable option, such as the user password, type of hard drive installed, and enabling or disabling base devices.

Entering BIOS setup program

About this task

Turn on (or restart) your computer and press F2 immediately.

NOTE: For most of the System Setup options, changes that you make are recorded but do not take effect until you restart the system.

Table 31. Navigation keys

| Keys | Navigation |
|------------|---|
| Up arrow | Moves to the previous field. |
| Down arrow | Moves to the next field. |
| Enter | Selects a value in the selected field (if applicable) or follow the link in the field. |
| Spacebar | Expands or collapses a drop-down list, if applicable. |
| Tab | Moves to the next focus area. NOTE: For the standard graphics browser only. |
| Esc | Moves to the previous page until you view the main screen. Pressing Esc in the main screen displays a message that prompts you to save any unsaved changes and restarts the system. |

One time boot menu

To enter **one time boot menu**, turn on your computer, and then press F12 immediately.

NOTE: It is recommended to shutdown the computer if it is on.

The one-time boot menu displays the devices that you can boot from including the diagnostic option. The boot menu options are:

- Removable Drive (if available)
- STXXXX Drive (if available)
- **i** **NOTE:** XXX denotes the SATA drive number.
- Optical Drive (if available)
- SATA Hard Drive (if available)
- Diagnostics
- **i** **NOTE:** Choosing **Diagnostics**, will display the **ePSA diagnostics** screen.

The boot sequence screen also displays the option to access the System Setup screen.

Updating the BIOS

Updating the BIOS in Windows

About this task

CAUTION: If BitLocker is not suspended before updating the BIOS, the next time you reboot the system it will not recognize the BitLocker key. You will then be prompted to enter the recovery key to progress and the system will ask for this on each reboot. If the recovery key is not known this can result in data loss or an unnecessary operating system re-install. For more information on this subject, search in the Knowledge Base Resource at www.dell.com/support.

Steps

1. Go to www.dell.com/support.
2. Click **Product support**. In the **Search support** box, enter the Service Tag of your computer, and then click **Search**.
NOTE: If you do not have the Service Tag, use the SupportAssist feature to automatically identify your computer. You can also use the product ID or manually browse for your computer model.
3. Click **Drivers & Downloads**. Expand **Find drivers**.
4. Select the operating system installed on your computer.
5. In the **Category** drop-down list, select **BIOS**.
6. Select the latest version of BIOS, and click **Download** to download the BIOS file for your computer.
7. After the download is complete, browse the folder where you saved the BIOS update file.
8. Double-click the BIOS update file icon and follow the on-screen instructions.
For more information, search in the Knowledge Base Resource at www.dell.com/support.

Updating the BIOS in Linux and Ubuntu

To update the system BIOS on a computer that is installed with Linux or Ubuntu, see the knowledge base article [000131486](https://www.dell.com/support/000131486) at www.dell.com/support.

Updating the BIOS using the USB drive in Windows

About this task

CAUTION: If BitLocker is not suspended before updating the BIOS, the next time you reboot the system it will not recognize the BitLocker key. You will then be prompted to enter the recovery key to progress and the system will ask for this on each reboot. If the recovery key is not known this can result in data loss or an unnecessary operating system re-install. For more information on this subject, search in the Knowledge Base Resource at www.dell.com/support.

Steps

1. Follow the procedure from step 1 to step 6 in [Updating the BIOS in Windows](#) to download the latest BIOS setup program file.
2. Create a bootable USB drive. For more information, search in the Knowledge Base Resource at www.dell.com/support.
3. Copy the BIOS setup program file to the bootable USB drive.
4. Connect the bootable USB drive to the computer that needs the BIOS update.

5. Restart the computer and press **F12** .
6. Select the USB drive from the **One Time Boot Menu**.
7. Type the BIOS setup program filename and press **Enter**.
The **BIOS Update Utility** appears.
8. Follow the on-screen instructions to complete the BIOS update.

Updating the BIOS from the F12 One-Time boot menu

Update your computer BIOS using the BIOS update.exe file that is copied to a FAT32 USB drive and booting from the F12 One-Time boot menu.

About this task

 **CAUTION:** If BitLocker is not suspended before updating the BIOS, the next time you reboot the system it will not recognize the BitLocker key. You will then be prompted to enter the recovery key to progress and the system will ask for this on each reboot. If the recovery key is not known this can result in data loss or an unnecessary operating system re-install. For more information on this subject, search in the Knowledge Base Resource at www.dell.com/support.

BIOS Update

You can run the BIOS update file from Windows using a bootable USB drive or you can also update the BIOS from the F12 One-Time boot menu on the computer.

Most of the Dell computers built after 2012 have this capability, and you can confirm by booting your computer to the F12 One-Time Boot Menu to see if BIOS FLASH UPDATE is listed as a boot option for your computer. If the option is listed, then the BIOS supports this BIOS update option.

 **NOTE:** Only computers with BIOS Flash Update option in the F12 One-Time boot menu can use this function.

Updating from the One-Time boot menu

To update your BIOS from the F12 One-Time boot menu, you need the following:

- USB drive formatted to the FAT32 file system (key does not have to be bootable)
- BIOS executable file that you downloaded from the Dell Support website and copied to the root of the USB drive
- AC power adapter that is connected to the computer
- Functional computer battery to flash the BIOS

Perform the following steps to perform the BIOS update flash process from the F12 menu:

 **CAUTION:** Do not turn off the computer during the BIOS update process. The computer may not boot if you turn off your computer.

Steps

1. From a turn off state, insert the USB drive where you copied the flash into a USB port of the computer.
2. Turn on the computer and press F12 to access the One-Time Boot Menu, select BIOS Update using the mouse or arrow keys then press Enter.
The flash BIOS menu is displayed.
3. Click **Flash from file**.
4. Select external USB device.
5. Select the file and double-click the flash target file, and then click **Submit**.
6. Click **Update BIOS**. The computer restarts to flash the BIOS.
7. The computer will restart after the BIOS update is completed.

System and setup password

Table 48. System and setup password

| Password type | Description |
|-----------------|--|
| System password | Password that you must enter to log in to your system. |
| Setup password | Password that you must enter to access and make changes to the BIOS settings of your computer. |

You can create a system password and a setup password to secure your computer.

 **CAUTION:** The password features provide a basic level of security for the data on your computer.

 **CAUTION:** Anyone can access the data that is stored on your computer if it is not locked and left unattended.

 **NOTE:** System and setup password feature is disabled.

Assigning a system setup password

Prerequisites

You can assign a new **System or Admin Password** only when the status is in **Not Set**.

About this task

To enter the system setup, press F12 immediately after a power-on or reboot.

Steps

1. In the **System BIOS** or **System Setup** screen, select **Security** and press Enter.
The **Security** screen is displayed.
2. Select **System/Admin Password** and create a password in the **Enter the new password** field.
Use the following guidelines to assign the system password:
 - A password can have up to 32 characters.
 - At least one special character: ! " # \$ % & ' () * + , - . / : ; < = > ? @ [\] ^ _ ` { | }
 - Numbers 0 through 9.
 - Upper case letters from A to Z.
 - Lower case letters from a to z.
3. Type the system password that you entered earlier in the **Confirm new password** field and click **OK**.
4. Press Esc and save the changes as prompted by the pop-up message.
5. Press Y to save the changes.
The computer restarts.

Deleting or changing an existing system setup password

Prerequisites

Ensure that the **Password Status** is Unlocked (in the System Setup) before attempting to delete or change the existing System and/or Setup password. You cannot delete or change an existing System or Setup password, if the **Password Status** is Locked.

About this task

To enter the System Setup, press F12 immediately after a power-on or reboot.

Steps

1. In the **System BIOS** or **System Setup** screen, select **System Security** and press Enter. The **System Security** screen is displayed.
2. In the **System Security** screen, verify that **Password Status** is **Unlocked**.
3. Select **System Password**, update, or delete the existing system password, and press Enter or Tab.
4. Select **Setup Password**, update, or delete the existing setup password, and press Enter or Tab.

NOTE: If you change the System and/or Setup password, reenter the new password when prompted. If you delete the System and/or Setup password, confirm the deletion when prompted.

5. Press Esc and a message prompts you to save the changes.
6. Press Y to save the changes and exit from System Setup. The computer restarts.

Clearing BIOS (System Setup) and System passwords

About this task

To clear the system or BIOS passwords, contact Dell technical support as described at www.dell.com/contactdell.

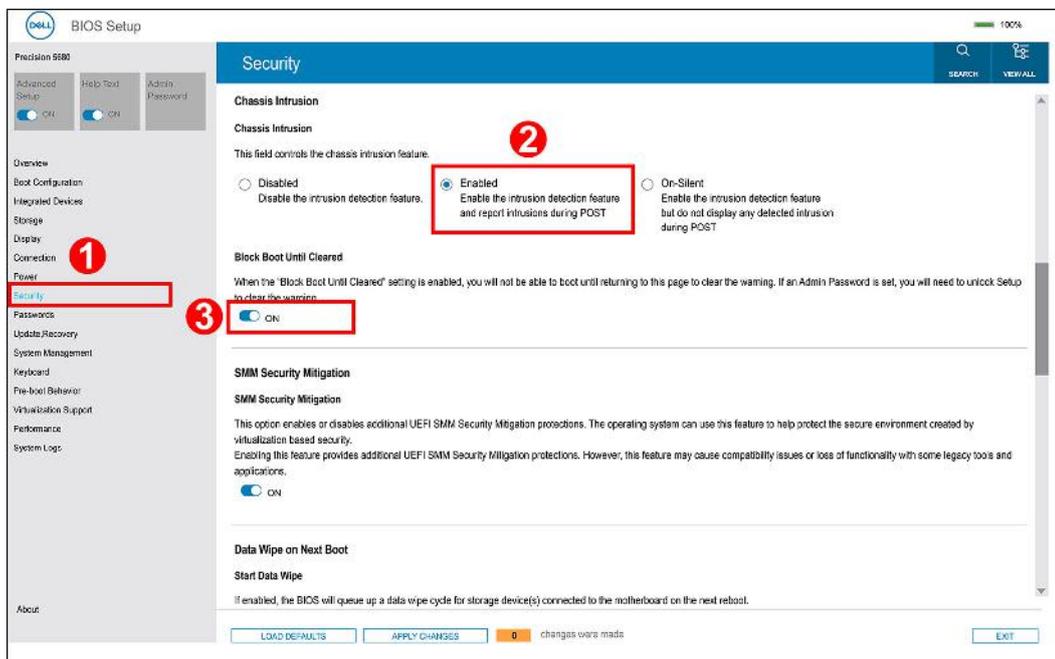

NOTE: For information on how to reset Windows or application passwords, refer to the documentation accompanying Windows or your application.

Clearing Chassis Intrusion Alerts

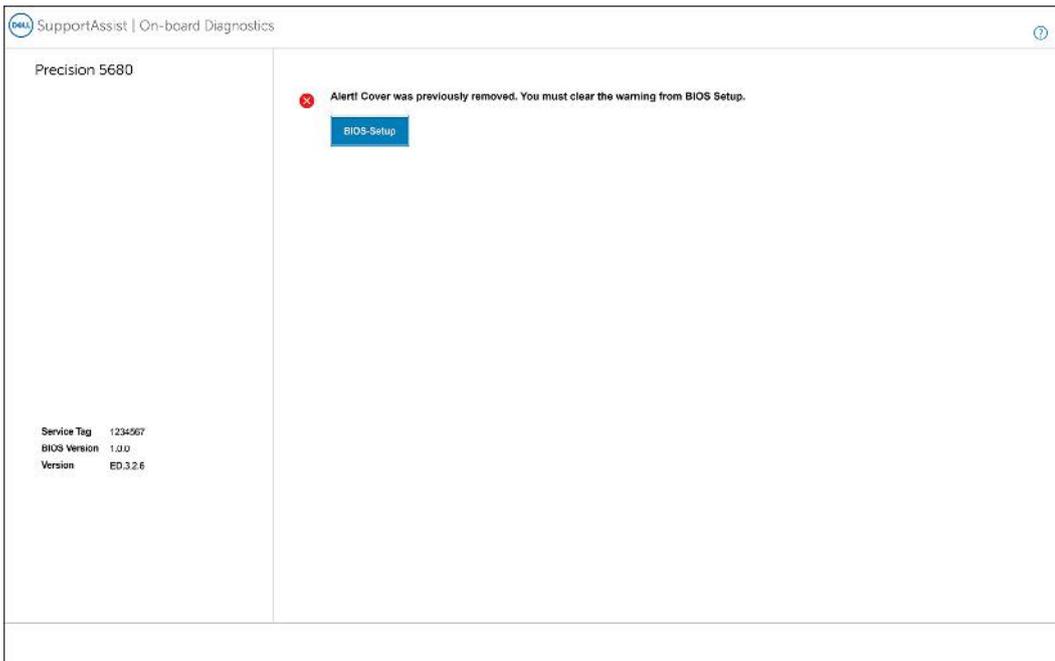

The system features a chassis intrusion switch which is able to detect any time the base cover has been removed from the system.

Alerts to notify you of any intrusions can be enabled via the **Chassis Intrusion** field in the **Security** sub-menu of the BIOS setup menu.

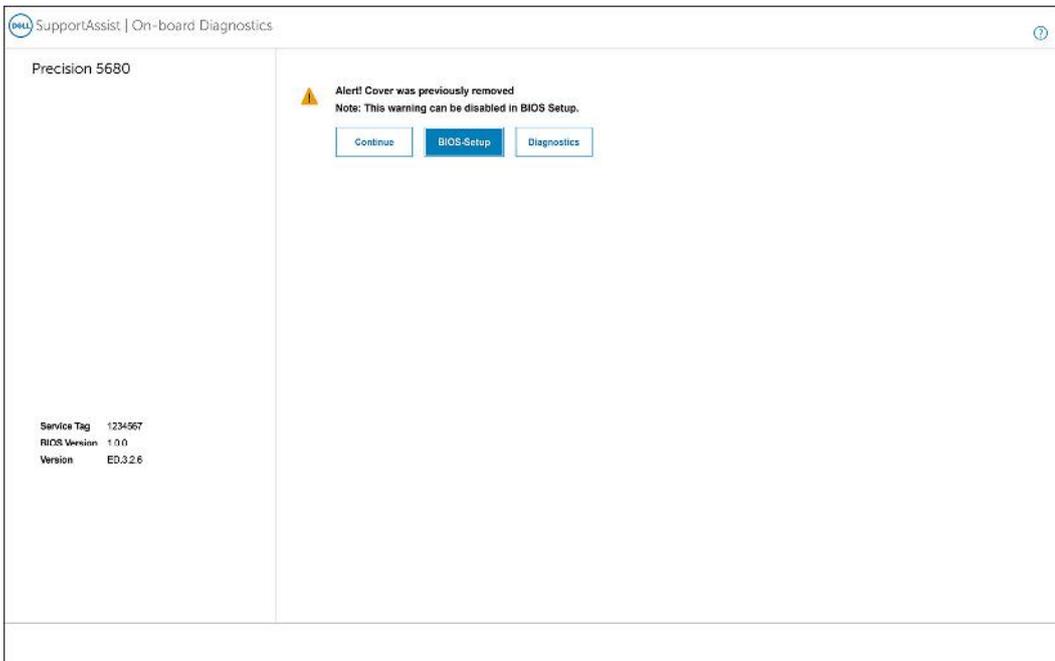

When enabled, the **Block Boot Until Cleared** field allows you to choose whether to prevent normal boot up of the system until the intrusion alert is cleared.

- If **Block Boot Until Cleared** is set to **ON**, the user must select **BIOS-Setup** and clear the intrusion alert in order to boot up normally.

- If **Block Boot Until Cleared** is set to **OFF**, select **Continue** to boot up normally or **BIOS-Setup** to clear the alert.

NOTE: If **Continue** is selected, the user will continue to see the alert each time the system is powered on until the alert is cleared.

To clear the alert, select **ON** in the **Clear Intrusion Warning** field in the **Security** sub-menu of the BIOS setup menu.

Troubleshooting

Handling swollen rechargeable Li-ion batteries

Like most laptops, Dell laptops use Lithium-ion batteries. One type of Lithium-ion battery is the rechargeable Li-ion battery. Rechargeable Li-ion batteries have increased in popularity in recent years and have become standard in the electronics industry due to customer preferences for a slim form factor (especially with newer ultra-thin laptops) and long battery life. Inherent to rechargeable Li-ion battery technology is the potential for swelling of the battery cells.

Swollen battery may impact the performance of the laptop. To prevent possible further damage to the device enclosure or internal components leading to malfunction, discontinue the use of the laptop and discharge it by disconnecting the AC adapter and letting the battery drain.

Swollen batteries should not be used and should be replaced and disposed of properly. We recommend contacting Dell product support for options to replace a swollen battery under the terms of the applicable warranty or service contract, including options for replacement by a Dell authorized service technician.

The guidelines for handling and replacing rechargeable Li-ion batteries are as follows:

- Exercise caution when handling rechargeable Li-ion batteries.
- Discharge the battery before removing it from the system. To discharge the battery, unplug the AC adapter from the system and operate the system only on battery power. When the system will no longer power on when the power button is pressed, the battery is fully discharged.
- Do not crush, drop, mutilate, or penetrate the battery with foreign objects.
- Do not expose the battery to high temperatures, or disassemble battery packs and cells.
- Do not apply pressure to the surface of the battery.
- Do not bend the battery.
- Do not use tools of any type to pry on or against the battery.
- If a battery gets stuck in a device as a result of swelling, do not try to free it as puncturing, bending, or crushing a battery can be dangerous.
- Do not attempt to reassemble a damaged or swollen battery into a laptop.
- Swollen batteries that are covered under warranty should be returned to Dell in an approved shipping container (provided by Dell)—this is to comply with transportation regulations. Swollen batteries that are not covered under warranty should be disposed of at an approved recycling center. Contact Dell product support at <https://www.dell.com/support> for assistance and further instructions.
- Using a non-Dell or incompatible battery may increase the risk of fire or explosion. Replace the battery only with a compatible battery purchased from Dell that is designed to work with your Dell computer. Do not use a battery from other computers with your computer. Always purchase genuine batteries from <https://www.dell.com> or otherwise directly from Dell.

Rechargeable Li-ion batteries can swell for various reasons such as age, number of charge cycles, or exposure to high heat. For more information on how to improve the performance and lifespan of the laptop battery and to minimize the possibility of occurrence of the issue, search Dell Laptop Battery in the Knowledge Base Resource at www.dell.com/support.

Locate the Service Tag or Express Service Code of your Dell computer

Your Dell computer is uniquely identified by a Service Tag or Express Service Code. To view relevant support resources for your Dell computer, we recommend entering the Service Tag or Express Service Code at www.dell.com/support.

For more information on how to find the Service Tag for your computer, see [Locate the Service Tag on your computer](#).

Dell SupportAssist Pre-boot System Performance Check diagnostics

About this task

SupportAssist diagnostics (also known as system diagnostics) performs a complete check of your hardware. The Dell SupportAssist Pre-boot System Performance Check diagnostics is embedded with the BIOS and is launched by the BIOS internally. The embedded system diagnostics provides a set of options for particular devices or device groups allowing you to:

- Run tests automatically or in an interactive mode
- Repeat tests
- Display or save test results
- Run thorough tests to introduce additional test options to provide extra information about the failed device(s)
- View status messages that inform you if tests are completed successfully
- View error messages that inform you of problems encountered during testing

 **NOTE:** Some tests for specific devices require user interaction. Always ensure that you are present at the computer terminal when the diagnostic tests are performed.

For more information, see <https://www.dell.com/support/kbdoc/000180971>.

Running the SupportAssist Pre-Boot System Performance Check

Steps

1. Turn on your computer.
2. As the computer boots, press the F12 key as the Dell logo appears.
3. On the boot menu screen, select the **Diagnostics** option.
4. Click the arrow at the bottom left corner.
Diagnostics front page is displayed.
5. Click the arrow in the lower-right corner to go to the page listing.
The items detected are listed.
6. To run a diagnostic test on a specific device, press Esc and click **Yes** to stop the diagnostic test.
7. Select the device from the left pane and click **Run Tests**.
8. If there are any issues, error codes are displayed.
Note the error code and validation number and contact Dell.

Built-in self-test (BIST)

M-BIST

M-BIST (Built In Self-Test) is the system board's built-in self-test diagnostics tool that improves the diagnostics accuracy of system board embedded controller (EC) failures.

 **NOTE:** M-BIST can be manually initiated before POST (Power On Self Test).

How to run M-BIST

 **NOTE:** M-BIST must be initiated on the system from a power-off state either connected to AC power or with battery only.

1. Press and hold both the **M** key on the keyboard and the **power button** to initiate M-BIST.
2. With both the **M** key and the **power button** held down, the battery indicator LED may exhibit two states:
 - a. OFF: No fault detected with the system board
 - b. AMBER: Indicates a problem with the system board
3. If there is a failure with the system board, the battery status LED will flash one of the following error codes for 30 seconds:

Table 49. LED error codes

| Blinking Pattern | | Possible Problem |
|------------------|-------|------------------------|
| Amber | White | |
| 2 | 1 | CPU Failure |
| 2 | 8 | LCD Power Rail Failure |
| 1 | 1 | TPM Detection Failure |
| 2 | 4 | Memory/RAM failure |

4. If there is no failure with the system board, the LCD will cycle through the solid color screens described in the LCD-BIST section for 30 seconds and then power off.

LCD Power rail test (L-BIST)

L-BIST is an enhancement to the single LED error code diagnostics and is automatically initiated during POST. L-BIST will check the LCD power rail. If there is no power being supplied to the LCD (that is if the L-BIST circuit fails), the battery status LED will flash either an error code [2,8] or an error code [2,7].

 **NOTE:** If L-BIST fails, LCD-BIST cannot function as no power will be supplied to the LCD.

How to invoke L-BIST Test:

1. Press the power button to start the system.
2. If the system does not start up normally, look at the battery status LED:
 - If the battery status LED flashes an error code [2,7], the display cable may not be connected properly.
 - If the battery status LED flashes an error code [2,8], there is a failure on the LCD power rail of the system board, hence there is no power supplied to the LCD.
3. For cases, when a [2,7] error code is shown, check to see if the display cable is properly connected.
4. For cases when a [2,8] error code is shown, replace the system board.

LCD Built-in Self Test (BIST)

Dell laptops have a built-in diagnostic tool that helps you determine if the screen abnormality you are experiencing is an inherent problem with the LCD (screen) of the Dell laptop or with the video card (GPU) and PC settings.

When you notice screen abnormalities like flickering, distortion, clarity issues, fuzzy or blurry image, horizontal or vertical lines, color fade etc., it is always a good practice to isolate the LCD (screen) by running the Built-In Self Test (BIST).

How to invoke LCD BIST Test

1. Power off the Dell laptop.
2. Disconnect any peripherals that are connected to the laptop. Connect only the AC adapter (charger) to the laptop.
3. Ensure that the LCD (screen) is clean (no dust particles on the surface of the screen).
4. Press and hold **D** key and **Power on** the laptop to enter LCD built-in self test (BIST) mode. Continue to hold the D key, until the system boots up.
5. The screen will display solid colors and change colors on the entire screen to white, black, red, green, and blue twice.
6. Then it will display the colors white, black and red.
7. Carefully inspect the screen for abnormalities (any lines, fuzzy color or distortion on the screen).
8. At the end of the last solid color (red), the system will shut down.

 **NOTE:** Dell SupportAssist Pre-boot diagnostics upon launch, initiates an LCD BIST first, expecting a user intervention confirm functionality of the LCD.

System diagnostic lights

Battery-status light

Indicates the power and battery-charge status.

Solid white—Power adapter is connected and the battery has more than 5 percent charge.

Amber—Computer is running on battery and the battery has less than 5 percent charge.

Off

- Power adapter is connected, and the battery is fully charged.
- Computer is running on battery, and the battery has more than 5 percent charge.
- Computer is in sleep state, hibernation, or turned off.

The power and battery-status light blinks amber along with beep codes indicating failures.

For example, the power and battery-status light blinks amber two times followed by a pause, and then blinks white three times followed by a pause. This 2,3 pattern continues until the computer is turned off indicating no memory or RAM is detected.

The following table shows different power and battery-status light patterns and associated problems.

Table 50. LED codes

| Diagnostic light codes | Problem description | Recommended Solution |
|------------------------|--|--|
| 1,1 | TPM detection failure | Replace the system board. |
| 1,2 | Unrecoverable SPI flash failure | Replace the system board. |
| 1,5 | i-Fuse failure | Replace the system board. |
| 1,6 | EC internal failure | Disconnect all power source (AC, battery, coin cell) and drain flea power by pressing and holding down the power button. |
| 2,1 | Processor failure | Replace the CPU. If CPU is on-board, replace the system board. |
| 2,2 | System board: BIOS or ROM (Read-Only Memory) failure | Replace the system board. |
| 2,3 | No memory or RAM (Random-Access Memory) detected | Reseat and swap memory modules between the slots. If the problem persists, replace the memory module |
| 2,4 | Memory or RAM (Random-Access Memory) failure | Reseat and swap memory modules between the slots. If the problem persists, replace the memory module. |
| 2,5 | Invalid memory installed | Reseat and swap memory modules between the slots. If the problem persists, replace the memory module. |
| 2,6 | System board or chipset error | Replace the system board. |
| 2,7 | Display failure - SBIOS message | Replace the LCD module. |
| 2,8 | Display failure - EC detection of power rail failure | Replace the system board. |
| 3,1 | Coin-cell battery failure | Reset the CMOS battery connection. If the problem persists, replace the RTC battery. |
| 3,2 | PCI, video card/chip failure | Replace the system board. |
| 3,3 | BIOS Recovery Image not found | Flash latest BIOS version. If the problem persists, replace the system board. |
| 3,4 | Recovery image found but invalid | Flash latest BIOS version. If the problem persists, replace the system board. |
| 3,5 | Power-rail failure | Replace the system board. |
| 3,6 | System BIOS Flash incomplete | Replace the system board. |

Table 50. LED codes (continued)

| Diagnostic light codes | Problem description | Recommended Solution |
|------------------------|------------------------------|---------------------------|
| 3,7 | Management Engine (ME) error | Replace the system board. |

Recovering the operating system

When your computer is unable to boot to the operating system even after repeated attempts, it automatically starts Dell SupportAssist OS Recovery.

Dell SupportAssist OS Recovery is a standalone tool that is preinstalled in all Dell computers installed with Windows operating system. It consists of tools to diagnose and troubleshoot issues that may occur before your computer boots to the operating system. It enables you to diagnose hardware issues, repair your computer, back up your files, or restore your computer to its factory state.

You can also download it from the Dell Support website to troubleshoot and fix your computer when it fails to boot into their primary operating system due to software or hardware failures.

For more information about the Dell SupportAssist OS Recovery, see *Dell SupportAssist OS Recovery User's Guide* at www.dell.com/serviceabilitytools. Click **SupportAssist** and then, click **SupportAssist OS Recovery**.

Backup media and recovery options

It is recommended to create a recovery drive to troubleshoot and fix problems that may occur with Windows. Dell proposes multiple options for recovering Windows operating system on your Dell PC. For more information, see [Dell Windows Backup Media and Recovery Options](#).

Wi-Fi power cycle

About this task

If your computer is unable to access the Internet due to Wi-Fi connectivity issues a Wi-Fi power cycle procedure may be performed. The following procedure provides the instructions on how to conduct a Wi-Fi power cycle:

 **NOTE:** Some ISPs (Internet Service Providers) provide a modem/router combo device.

Steps

1. Turn off your computer.
2. Turn off the modem.
3. Turn off the wireless router.
4. Wait for 30 seconds.
5. Turn on the wireless router.
6. Turn on the modem.
7. Turn on your computer.

Drain residual flea power (perform hard reset)

About this task

Flea power is the residual static electricity that remains in the computer even after it has been powered off and the battery is removed.

For your safety, and to protect the sensitive electronic components in your computer, you are requested to drain residual flea power before removing or replacing any components in your computer.

Draining residual flea power, also known as a performing a "hard reset", is also a common troubleshooting step if your computer does not power on or boot into the operating system.

To drain residual flea power (perform a hard reset)

Steps

1. Turn off your computer.
2. Disconnect the power adapter from your computer.
3. Remove the base cover.
4. Remove the battery.
5. Press and hold the power button for 20 seconds to drain the flea power.
6. Install the battery.
7. Install the base cover.
8. Connect the power adapter to your computer.
9. Turn on your computer.

NOTE: For more information about performing a hard reset, search in the Knowledge Base Resource at www.dell.com/support.
